

**MALNAD COLLEGE OF ENGINEERING, HASSAN**  
(An Autonomous Institution Affiliated to VTU, Belagavi)

**Autonomous Programme**  
**Bachelor of Engineering**

**Department of**  
**COMPUTER SCIENCE AND BUSINESS SYSTEMS**

**SCHEME and SYLLABUS**  
(2025 Admitted Batch)

**Academic Year 2026-2027**

**MALNAD COLLEGE OF ENGINEERING, HASSAN**  
**(An Autonomous Institution Affiliated to VTU, Belagavi)**  
**DEPARTMENT OF COMPUTER SCIENCE AND BUSINESS SYSTEMS**

**VISION OF THE INSTITUTE**

To be an institute of excellence in engineering education and research, producing socially responsible professionals.

**MISSION OF THE INSTITUTE**

1. Create conducive environment for learning and research
2. Establish industry and academia collaborations
3. Ensure professional and ethical values in all institutional endeavours

**VISION OF THE DEPARTMENT**

Emerge as an industry focused centre for promoting innovation, entrepreneurship, research and best practices of computer science together with managerial skills to serve the society and industry.

**MISSION OF THE DEPARTMENT**

1. Impart globality connected cutting-edge technologies and business skills
2. Enhance industrial experience, promote entrepreneurship and research through industry institute interaction
3. Implement best practices to enrich knowledge and skill sets
4. Produce competent professionals with societal and environmental concern

**MALNAD COLLEGE OF ENGINEERING, HASSAN**  
**(An Autonomous Institution Affiliated to VTU, Belagavi)**  
**DEPARTMENT OF COMPUTER SCIENCE AND BUSINESS SYSTEMS**

**PROGRAM EDUCATIONAL OBJECTIVES (PEOs)**

- PEO1:** Explore and excel in advanced technologies across emerging domains.
- PEO2:** Develop professional skills that enhance employability and support higher education in contemporary fields.
- PEO3:** Empower research skills through lifelong learning to adapt to the field of IT.
- PEO4:** Demonstrate environmental awareness and sustainable practices to address societal and community needs.

**PROGRAM OUTCOMES (POs)**

1. **Engineering knowledge:** Apply knowledge of mathematics, natural science, computing, engineering fundamentals and an engineering specialization as specified in WK1 to WK4 respectively to develop to the solution of complex engineering problems.
2. **Problem analysis:** Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions with consideration for sustainable development. (WK1 to WK4)
3. **Design/Development of solutions:** Design creative solutions for complex engineering problems and design/develop systems/components/processes to meet identified needs with consideration for the public health and safety, whole-life cost, net zero carbon, culture, society and environment as required. (WK5)
4. **Conduct investigations of complex problems:** Conduct investigations of complex engineering problems using research-based knowledge including design of experiments, modelling, analysis & interpretation of data to provide valid conclusions. (WK8).
5. **Engineering tool usage:** Create, select and apply appropriate techniques, resources and modern engineering & IT tools, including prediction and modelling recognizing their limitations to solve complex engineering problems. (WK2 and WK6)
6. **The engineer and the world:** Analyze and evaluate societal and environmental aspects while solving complex engineering problems for its impact on sustainability with reference to economy, health, safety, legal framework, culture and environment. (WK1, WK5, and WK7).

**MALNAD COLLEGE OF ENGINEERING, HASSAN**  
**(An Autonomous Institution Affiliated to VTU, Belagavi)**  
**DEPARTMENT OF COMPUTER SCIENCE AND BUSINESS SYSTEMS**

**PROGRAM OUTCOMES (POs)**

7. **Ethics:** Apply ethical principles and commit to professional ethics, human values, diversity and inclusion; adhere to national & international laws. (WK9)
8. **Individual and collaborative team work:** Function effectively as an individual, and as a member or leader in diverse/multi-disciplinary settings.
9. **Communication:** Communicate effectively and inclusively within the community and society at large, such as being able to comprehend and write effective reports and design documentation, make effective presentations considering cultural, language, and learning differences.
10. **Project management and finance:** Apply knowledge and understanding of engineering management principles and economic decision-making and apply these to one's own work, as a member and leader in a team, and to manage projects and in multidisciplinary environments.
11. **Life-long learning:** Recognize the need for, and have the preparation and ability to engage independent and life-long learning in the broadest context of technological change. (WK8).

**PROGRAM SPECIFIC OUTCOMES ( P S O )**

**PSO1:** Develop business and IT solutions to solve real life problems.

**PSO2:** Implement software tools and new-generation technologies in industry-relevant fields.

**MALNAD COLLEGE OF ENGINEERING, HASSAN**  
**(An Autonomous Institution Affiliated to VTU, Belagavi)**  
**DEPARTMENT OF COMPUTER SCIENCE AND BUSINESS SYSTEMS**

**Semester-wise Credit Distribution**

| <b>Curricular Component / Semester</b>                                                                | <b>I</b>  | <b>II</b> | <b>III</b> | <b>IV</b> | <b>V</b>  | <b>VI</b> | <b>VII</b> | <b>VIII</b> | <b>Total Credits</b> |

| <b>Sampling and its Properties:</b> Sampling methods and techniques, Point estimation and confidence intervals, Sample size determination.<br><b>Hypothesis Testing:</b> Introduction to hypothesis testing- Null and alternative hypotheses, Type I and Type II errors, significance level, and p-values. Parametric Tests: One-sample and two-sample-z-tests, t-tests. Chi-square test for independence of test.<br><b>Applications:</b> Cloud server performance analysis, Cyber-security login analysis<br><b>Self-study:</b> drying time problem, F-test Analysis of variance.                                                                                        |                                                                                                                                                                                                                                          |                          |                  |
| <b>Module 4</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                                                                                                                                                                                                                          |                          | <b>10 Hours</b>  |

## MALNAD COLLEGE OF ENGINEERING, HASSAN

(An Autonomous Institution Affiliated to VTU, Belagavi)  
**DEPARTMENT OF COMPUTER SCIENCE AND BUSINESS SYSTEMS**

**Regression Analysis:** Simple linear regression. Assumptions and Interpretation. Coefficient of determination (R-squared). Multiple Regression Analysis

**Analysis of Variance (ANOVA):** One-way ANOVA and two-way ANOVA.

**Self-study:** Model assumptions and diagnostics, Variable selection techniques (stepwise, backward, forward), Analysis of Categorical Data

Note–Theorems and properties without proof. Applicable to all the modules.  
 Self-study is not included in SEE

| <b>PART A</b> |                                                                                                                                                                                                                                                                                                                  |
|---------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1.            | Design and Implement a menu driven Program in C for the following Array operations:<br>1.Creating an Array of N Integer Elements<br>2.Display of Array Elements with Suitable Headings<br>3.Inserting an Element (ELEM) at a given valid Position (POS)<br>4.Deleting an Element at a given valid Position (POS) |
| 2.            | Illustrate the concepts of malloc(), calloc(), realloc() for the dynamic allocation of memory.                                                                                                                                                                                                                   |
| 3.            | Write a C Program to create a class called STACK to store Integers for the following operations (Array Implementation of Stack with maximum size MAX) a.) Push an Element on to Stack b.)Pop an Element from Stack c.) Demonstrate Overflow and Underflow situations on Stack.                                   |
| 4.            | Write recursive C Programs for Searching an element in a given list of integers using the Binary search method. Solving the Towers of Hanoi                                                                                                                                                                      |
| 5.            | Develop a Program in C for converting an Infix Expression to Postfix Expression. Program should support for both parenthesized and free parenthesized expressions with the operators: +, -, *, /, % (Remainder), ^ (Power) and alphanumeric operands.                                                            |
| 6.            | Create a Queue, perform different operations such as Insert, Delete and Display.                                                                                                                                                                                                                                 |
| 7.            | Write a menu driven C Program to simulate the working of a Circular Queue of integers using an array. Provide the following operations: a.) Insert b.) Delete c.) Display                                                                                                                                        |
| 8.            | Write a menu driven C Program using dynamic variables and pointers, to construct a Singly linked list of integers and perform insertion and deletion operations.                                                                                                                                                 |

## Course Articulation Matrix

| <b>PART-A</b> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|---------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1.            | Verification of Boolean laws                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 2.            | Convert a given 4 bit binary number to its equivalent 4 bit gray code using logic gates, construct the truth table, implement the logic diagram and verify the output.                                                                                                                                                                                                                                                                                                |
| 3.            | Convert a given 4 bit gray number to its equivalent 4 bit binary code using logic gates, construct the truth table, implement the logic diagram and verify the output.                                                                                                                                                                                                                                                                                                |
| 4.            | Design and implement a binary to BCD converter using logic gates and verify its truth table.                                                                                                                                                                                                                                                                                                                                                                          |
| 5.            | Design and implement a BCD to excess-3 converter using logic gates and verify its truth table.                                                                                                                                                                                                                                                                                                                                                                        |
| 6.            | Design and implement a excess-3 to BCD converter using logic gates and verify its truth table.                                                                                                                                                                                                                                                                                                                                                                        |
| 7.            | Design and verify the operation of half adder and full adder circuits using logic gates on a digital trainer kit.                                                                                                                                                                                                                                                                                                                                                     |
| 8.            | Design and verify the operation of half subtractor and full subtractor circuits using logic gates on a digital trainer kit.                                                                                                                                                                                                                                                                                                                                           |
| <b>PART-B</b> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 1.            | In a battery powered computer, the diskette driver motor 1 should be ON if <ol style="list-style-type: none"><li>There is a diskette in the drive.</li><li>The diskette drive door is closed.</li><li>Diskette drive motor 2 is not ON.</li><li>The battery low signal is not present and</li><li>The computer has started a read operation, or the computer has started a write operation.</li></ol> Design a circuit to solve the above scenario using basic gates. |
| 2.            | You will gain weight if you eat too much or you do not exercise enough, and your metabolism rate is too low. Design a system such that it alarms you when you gain weight using NAND gates.                                                                                                                                                                                                                                                                           |
| 3.            | The cooling system should turn ON when: <ol style="list-style-type: none"><li>Server temperature is high, and</li><li>Either CPU utilization is high or humidity is high.</li></ol> Design a circuit to solve the above scenario using basic gates.                                                                                                                                                                                                                   |
| 4.            | The circuit breaker will trip if <ol style="list-style-type: none"><li>The hair drier is turned ON.</li><li>The microwave oven is used.</li><li>All the lights in the room are ON or</li><li>There is a short circuit in any appliance.</li></ol> Solve the above issue using relevant MUX.                                                                                                                                                                           |
| 5.            | Consider a computer operator who needs to generate a sequence 1011 continuously which is transmitted across the network. Design a circuit to implement this job.                                                                                                                                                                                                                                                                                                      |
| 6.            | Consider a scenario where in you want to take print out of few selected random pages in sequence numbered from 0 to 15. Design a circuit to achieve this task using J-K Flip-flops.                                                                                                                                                                                                                                                                                   |
| 7.            | Assume you are generating and transmitting binary data from one place to another. Check whether the sent data is transmitted properly.                                                                                                                                                                                                                                                                                                                                |
| 8.            | Assume you to send a secret message consisting of number form 1 to 9 and letter from A to secret message is encoded using excess-3 code. Design a circuit using ADDER IC to send secret message to your friend.                                                                                                                                                                                                                                                       |

| 1.                                                                                            | Executed Fundamental UNIX shell script commands:<br>Ls ,cat, cd, od, mkdir, echo, date, mv, cal, wc, pwd, rmdir, rm, touch, sort, read, clear, ps-u, ps whoami, alias, find, test, expr, set, shift, type, grep, sed, awk, tr, chmod, job, cut, paste, top, env, Bash |                                       |                 |
| 2.                                                                                            | Write a shell script that takes a valid directory name as an argument and recursively descends all sub-directories, finds the maximum length of any file, and prints it.                                                                                              |                                       |                 |
| 3.                                                                                            | Write a shell script that accepts a pathname and creates all the components in that pathname as directories (e.g., mpc a/b/c/d).                                                                                                                                      |                                       |                 |
| 4.                                                                                            | Write a shell script that accepts two filenames as arguments, checks if their permissions are identical, and outputs either the common permissions or each filename with its permissions.                                                                             |                                       |                 |
| 5.                                                                                            | Create a script file called file-properties that reads a filename entered by the user and outputs its properties.                                                                                                                                                     |                                       |                 |
| 6.                                                                                            | Write a shell script that accepts one or more filenames as arguments and converts all of them to uppercase if they exist in the current directory.                                                                                                                    |                                       |                 |
| 7.                                                                                            | Write a shell script that accepts a filename as an argument and displays its creation time if the file exists, otherwise shows an error message.                                                                                                                      |                                       |                 |
| 8.                                                                                            | Write a shell script that, when executed, displays “Good Morning”, “Good Afternoon”, or “Good Evening” depending on the current time.                                                                                                                                 |                                       |                 |
| 9.                                                                                            | Write a shell script that accepts a filename, starting, and ending line numbers as arguments, and displays all lines between the given line numbers.                                                                                                                  |                                       |                 |
| 10.                                                                                           | Create a shell script that functions as a countdown timer.                                                                                                                                                                                                            |                                       |                 |
| <b>PART B</b>                                                                                 |                                                                                                                                                                                                                                                                       |                                       |                 |
| 1.                                                                                            | Design a Menu-Driven File Management Utility to create, copy, move, rename, delete, search, and display files/directories. Students may choose the menu structure and features.                                                                                       |                                       |                 |
| 2.                                                                                            | Develop a Student Record Management System using text files. The system should support operations such as add, search, update, delete, and display records.                                                                                                           |                                       |                 |
| 3.                                                                                            | Design a File Organizer that automatically groups files into folders based on file extension (e.g., .txt, .pdf, .sh) or any other user-defined criterion.                                                                                                             |                                       |                 |

|     |                                                                                                                                                                                                          |
|-----|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 4.  | Develop a Simple Text Processing Tool that performs operations such as counting words, finding keywords, removing duplicate lines, or searching patterns. Students can choose the required operations.   |
| 5.  | Design a System Information Dashboard that displays CPU information, memory usage, disk usage, logged-in users, and running processes in a formatted manner.                                             |
| 6.  | Develop a File Permission Auditor that checks file permissions in a directory and identifies files with inappropriate permissions. Students may suggest or apply corrections.                            |
| 7.  | Design a Backup Utility that copies selected files/directories into a backup folder with the current date and time. Students may include automatic backup options.                                       |
| 8.  | Develop a Log Analyzer that extracts useful information from a log or text file, such as error messages, login attempts, or frequently occurring words.                                                  |
| 9.  | Design a Personal Task Manager that allows users to add, delete, update, search, and display daily tasks stored in a text file. Students may choose the menu and data format.                            |
| 10. | Develop a Mini Linux Utility by combining any three or more UNIX commands into a single shell application that solves a practical problem. Students should identify the problem and design the solution. |

| 1. Installation of R Studio<br>2. Write an R Program to take input from the user (name and age) and display the values. Also print the version of R installation.<br>3. Write an R Program to get the details of the objects in memory.<br>4. Write an R Program to create a sequence of numbers from 20 to 50 and find the mean and product of numbers from 20 to 60 and sum of numbers from 51 to 91.<br>5. Write an R Program to multiply two vectors of integer's type and length 3.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                                      |                |                 |
| <b>Part -A</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                                                      |                |                 |
| 1. Demonstrate the steps for installation of R and R Studio. Perform the following:<br>a) Assign different type of values to variables and display the type of variable. Assign different types such as Double, Integer, Logical, Complex and Character and understand the difference between each data type.<br>b) Demonstrate Arithmetic and Logical Operations with simple examples.<br>c) Demonstrate generation of sequences and creation of vectors.<br>d) Demonstrate Creation of Matrices<br>e) Demonstrate the Creation of Matrices from Vectors using Binding Function.<br>f) Demonstrate element extraction from vectors, matrices and arrays<br>2. Assess the Financial Statement of an Organization being supplied with 2 vectors of data: Monthly Revenue and Monthly Expenses for the Financial Year. You can create your own sample data vector for this experiment) Calculate the following financial metrics:<br>a. Profit for each month.<br>b. Profit after tax for each month (Tax Rate is 30%).<br>c. Profit margin for each month equals to profit after tax divided by revenue.<br>d. Good Months – where the profit after tax was greater than the mean for the year.<br>e. Bad Months – where the profit after tax was less than the mean for the year.<br>f. The best month – where the profit after tax was max for the year.<br>g. The worst month – where the profit after tax was min for the year. |                                                                      |                |                 |
| Note: a. All Results need to be presented as vectors b. Results for Dollar values need to be calculated with \$0.01 precision, but need to be presented in Units of \$1000 (i.e 1k)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                                      |                |                 |

**DEPARTMENT OF COMPUTER SCIENCE AND BUSINESS SYSTEMS**

with no decimal points c. Results for the profit margin ratio need to be presented in units of % with no decimal point. d. It is okay for tax to be negative for any given month (deferred tax asset) e. Generate CSV file for the data.

3. Develop a program to create two 3 X 3 matrices A and B and perform the following operations a) Transpose of the matrix b) addition c) subtraction d) multiplication
4. Develop a program to find the factorial of given number using recursive function calls.
5. Develop an R Program using functions to find all the prime numbers up to a specified number by the method of Sieve of Eratosthenes.
6. The built-in data set mammals contain data on body weight versus brain weight. Develop R commands to:
  - a) Find the Pearson and Spearman correlation coefficients. Are they similar?
  - b) Plot the data using the plot command.
  - c) Plot the logarithm (log) of each variable and see if that makes a difference.
7. Develop R program to create a Data Frame with following details and do the following operations.

| Item code | Item category    | Item price |
|-----------|------------------|------------|
| 1001      | Electronics      | 700        |
| 1002      | Desktop Supplies | 300        |
| 1003      | Office Supplies  | 350        |
| 1004      | USB              | 400        |
| 1005      | CD Drive         | 800        |

- a) Subset the Data frame and display the details of only those items whose price is greater than or equal to 350.
  - b) Subset the Data frame and display only the items where the category is either “Office Supplies” or “Desktop Supplies”
  - c) Create another Data Frame called “item-details” with three different fields item code, ItemQtyonHand and ItemReorderLvl and merge the two frames
8. Let us use the built-in dataset air quality which has Daily air quality measurements in New York, May to September 1973. Develop R program to generate histogram by using appropriate arguments for the following statements.
  - a) Assigning names, using the air quality data set.
  - b) Change colours of the Histogram
  - c) Remove Axis and Add labels to Histogram
  - d) Change Axis limits of a Histogram
  - e) Add Density curve to the histogram
9. Design a data frame in R for storing about 20 employee details. Create a CSV file named “input.csv” that defines all the required information about the employee such as id, name, salary, start date, dept. Import into R and do the following analysis.
  - a) Find the total number rows & columns
  - b) Find the maximum salary
  - c) Retrieve the details of the employee with maximum salary
  - d) Retrieve all the employees working in the IT Department.
  - e) Retrieve the employees in the IT Department whose salary is greater than 20000 and write these details into another file “output.csv”
10. Using the built-in dataset mtcars which is a popular dataset consisting of the design and fuel consumption patterns of 32 different automobiles. The data was extracted from the 1974 Motor Trend US magazine and comprises fuel consumption and 10 aspects of

- What is the total number of observations and variables in the dataset?
- Find the car with the largest hp and the least hp using suitable functions
- Plot histogram / density for each variable and determine whether continuous variables are normally distributed or not. If not, what is their skewness?
- What is the average difference of gross horsepower (hp) between automobiles with 3 and 4 number of cylinders (cyl)? Also determine the difference in their standard deviations.
- Which pair of variables has the highest Pearson correlation?

- 1.Design an R program to analyse personal or household expenses and visualise spending patterns.
- 2.Develop a financial performance analysis system using revenue and expense data with suitable profitability measures.
- 3.Model a real-world resource allocation problem using matrices and perform appropriate matrix operations.
- 4.Develop a recursive R program to solve a selected mathematical or computational problem.
- 5.Analyse prime number patterns using the Sieve of Eratosthenes and compare it with another method.
- 6.Select a real-world dataset and investigate relationships between numerical variables using correlation and data transformation.
- 7.Design an inventory management system to identify reorder requirements, stock value and category-wise details.
- 8.Analyse an environmental dataset using suitable statistical summaries and data visualisation techniques.
- 9.Develop an employee data analytics system to support salary, department and performance-related decisions.
- 10.** Perform exploratory data analysis on an automobile dataset to study factors affecting vehicle performance and fuel efficiency.

| <ol style="list-style-type: none"><li>1. Create a worksheet in Microsoft Excel to enter sample data, format cells, apply borders, use autofill, and perform basic workbook and worksheet operations.</li><li>2. Prepare a dataset in Excel and apply sorting, filtering, custom sorting, and advanced filtering to organize and retrieve required information.</li><li>3. Use basic Excel functions such as SUM, AVERAGE, MIN, MAX, COUNT, COUNTA, ROUND, and SQRT to perform simple numerical analysis on a given dataset.</li><li>4. Apply conditional and logical functions such as IF, Nested IF, AND, OR, IFERROR, COUNTIF, SUMIF, and AVERAGEIF to analyze data based on specific conditions.</li><li>5. Clean text-based data using Excel text functions such as UPPER, LOWER, PROPER, TRIM, CLEAN, CONCAT, TEXTJOIN, LEFT, RIGHT, and MID.</li><li>6. Perform date and time-based analysis using Excel functions such as DATE, TODAY, NOW, DATEVALUE, TIMEVALUE, DATEDIF, YEAR, MONTH, and DAY.</li><li>7. Create data validation rules in Excel using drop-down lists, input messages, error alerts, duplicate checking, and restricted data entry conditions.</li><li>8. Use lookup and reference functions such as VLOOKUP, HLOOKUP, XLOOKUP, INDEX, and MATCH to retrieve and compare data from different tables.</li><li>9. Create Pivot Tables and Pivot Charts to summarize, group, filter, and analyze large datasets using fields, calculated values, and category-wise aggregation.</li><li>10. Create different types of charts such as column charts, bar charts, line charts, pie charts, histograms, and scatter plots to visually represent data.</li><li>11. Apply conditional formatting features such as highlight cell rules, top/bottom rules, data bars, color scales, and icon sets to identify patterns and trends in data.</li><li>12. Perform What-If Analysis in Excel using Goal Seek, Scenario Manager, and Data Tables to support business decision-making.</li><li>13. Calculate descriptive statistical measures such as mean, median, mode, variance, standard deviation, range, and correlation using Excel functions.</li><li>14. Use Excel Data Analysis ToolPak to perform descriptive statistics, correlation analysis, covariance, and basic regression analysis on a given dataset.</li><li>15. Design an interactive Excel dashboard using Pivot Tables, Pivot Charts, slicers, timelines, KPI cards, summary tables, and charts.</li></ol> |                                                                                                                                                                                               |                           |                 |

**MALNAD COLLEGE OF ENGINEERING, HASSAN**  
**(An Autonomous Institution Affiliated to VTU, Belagavi)**  
**DEPARTMENT OF COMPUTER SCIENCE AND BUSINESS SYSTEMS**

16. Complete a mini project using a real-world dataset by cleaning the data, applying formulas, creating Pivot Tables, generating charts, preparing a dashboard, and submitting a short analytical report.

**Part - B**

1. Design a personal or household budget workbook to record expenses, calculate savings, and analyse monthly spending patterns.
2. Develop a sales analysis worksheet to sort, filter, summarise, and identify high-performing products, regions, or salespersons.
3. Create an employee payroll system using suitable arithmetic, logical, conditional, date, and lookup functions.
4. Design a student performance analysis workbook to calculate grades, ranks, attendance, subject-wise results, and overall performance.
5. Develop an inventory management workbook to monitor stock levels, identify reorder items, calculate inventory value, and validate data entry.
6. Create a data-cleaning solution for a customer or employee dataset using text, date, duplicate-removal, and error-handling functions.
7. Design a business decision model using Goal Seek, Scenario Manager, and Data Tables to analyse alternative financial outcomes.
8. Analyse a real-world dataset using descriptive statistics, correlation, regression, and suitable charts.
9. Develop an interactive dashboard using Pivot Tables, Pivot Charts, slicers, timelines, KPI cards, and conditional formatting.
10. Complete a mini-project using a real-world dataset involving data cleaning, formula application, statistical analysis, visualisation, dashboard creation, and interpretation of findings.

**Course Objective:** To explore principles and techniques of data visualization using Python.

**Course Outcomes(COs):** Upon completion of the course, students shall be able to:

| <b>No.</b> | <b>Course Outcomes</b>                                                                   | <b>Mapping to POs</b> | <b>Mapping to PSOs</b> |
|------------|------------------------------------------------------------------------------------------|-----------------------|------------------------|
| <b>1.</b>  | Demonstrate the use of IDLE or PyCharm IDE to create Python Applications                 | 1, 5                  | -                      |
| <b>2.</b>  | Apply various visualization techniques using suitable python libraries.                  | 2, 5                  | 2                      |
| <b>3</b>   | Implement, document and present the data visualization projects for the chosen problems. | 4, 11                 | 2                      |

**List of programming using Python libraries**

1. Write a Python program to read data from a CSV file and create a line plot to visualize the trend over time. Customize the plot with appropriate labels, title, and colors.
2. Load a dataset containing information about students' scores in different subjects. Create a scatter plot to visualize the relationship between two variables (e.g., math score vs. science score). Use Seaborn to enhance the plot with appropriate styling and add labels.
3. Given a dataset with multiple variables, create a figure with two subplots: one displaying a line plot and the other showing a bar chart. Customize the subplots with appropriate titles, legends, and colors.
4. Load a dataset containing information about employees' salaries across different departments. Create a box plot and a violin plot to visualize the distribution of salaries by department. Customize the plots and add appropriate labels and titles.
5. Load a dataset containing stock prices over time. Create a line plot to visualize the stock prices and add appropriate labels and titles. Format the x-axis tick labels to display the dates properly.
6. Load a dataset containing temperature readings over time. Create an interactive line plot using Plotly, which displays the temperature when hovering over the data points. Add appropriate labels and customize the plot's appearance.
7. Load a dataset with information about population density by country. Create a choropleth map using GeoPandas to visualize the population density. Customize the map's appearance and add a colors legend.
8. Design and implement an interactive dashboard using Dash to display various visualizations. Include at least two interactive controls (e.g., dropdowns, sliders) to update the visualizations dynamically.

| SEE          | 50 Marks                    | Total Hours | 28       |

**Course Objective:** To use GitLab/Git and utilize it for software development.

**Course Outcomes(COs):** Upon completion of the course ,students shall be able to:

| No. | Course Outcomes                                      | Mapping to POs | Mapping to PSOs |
|-----|------------------------------------------------------|----------------|-----------------|
| 1.  | Construct the repository using various Git commands. | 3, 4, 5        | 1,2             |
| 2.  | Demonstrate and document the work carried out        | 5, 9, 11       | 1, 2            |

**List of Experiments:**

1. Initializing a Repository: Initialize a new Git repository for a simple project. Add a few files to the repository and commit them.
2. Committing Changes: Make changes to the files in the repository and commit them. Practice creating meaningful commit messages
3. Creating and Switching Branches: Create a new branch in the repository, make changes in the branch, and switch between branches.
4. Merging Branches: Create a branch, make changes in both the main branch and the new branch, and merge the changes back into the main branch.
5. Resolving Merge Conflicts: Create a merge conflict by making conflicting changes in two different branches. Practice resolving the conflict using Git's conflict resolution tools.
6. Working with Remote Repositories: Clone a remote repository to your local machine. Make changes locally and push the changes back to the remote repository.
7. Collaborating with Others: Practice collaborating with others using Git. Clone a shared repository, make changes, push the changes, and pull changes made by others.
8. Reverting and Rolling Back Commits: Experiment with reverting commits and rolling back changes to a previous state in the repository using Git commands.
9. Tagging Releases: Tag a specific commit in the repository as a release version. Practice creating annotated tags and lightweight tags.
10. Ignoring Files: Create a .git ignore file to exclude certain files or directories from being tracked by Git.
11. Viewing Repository History: Use Git commands to view the commit history, explore differences between commits, and track changes made over time.  
 Branch Management: Practice creating, deleting, and renaming branches in the repository using Git commands.

**Part - B**

1. A new software project has no version history. Establish a Git repository, organise the project files, and create an appropriate sequence of initial commits.
2. Examine a repository containing several poorly written commits and reorganise the changes using meaningful commit messages and logical checkpoints.
3. Simulate the development of two independent features using separate branches and demonstrate an effective branch creation, switching, renaming, and deletion strategy.
4. Two developers have completed different features in separate branches. Integrate their work into the main branch and verify that the combined project functions correctly.
5. Reproduce a merge-conflict situation in which two branches modify the same section of a file,

**MALNAD COLLEGE OF ENGINEERING, HASSAN**  
**(An Autonomous Institution Affiliated to VTU, Belagavi)**  
**DEPARTMENT OF COMPUTER SCIENCE AND BUSINESS SYSTEMS**

resolve the conflict, and document the decisions made.

6. Set up a local–remote repository workflow by cloning a project, making local changes, synchronising with the remote repository, and handling updates made by another contributor.
7. Conduct a collaborative development exercise in which team members divide tasks, work on separate branches, exchange changes, and maintain a consistent repository history.
8. A recently committed change introduces an error into a stable project. Identify the problematic commit and restore the project using suitable revert, reset, or checkout operations.
9. Prepare a repository for a software release by creating version tags, writing release-related commits, and distinguishing between lightweight and annotated tags.
10. Audit a project repository to identify unnecessary, sensitive, or generated files; create an appropriate .gitignore file and demonstrate useful commands for examining history and comparing versions.

|--------------|--------------------------------------|-------------|----------|
| Course Code  | 25SCR                                | (L-T-P)C    | (0-0-2)1 |
| Exam         | 3 Hrs.                               | Hours/Week  | 2        |
| CIE + SEE    | 50 marks + 50 Marks                  | Total Hours | 30       |

**Course Objective:** The Community Project / Societal Project is a practical, project-based learning course that builds students' awareness on Educational Social Responsibility (ESR). It focuses on real issues such as the adaptation of technology for rural and urban development, the application of tools for enhanced governance in civic societies, and sustainable technological solutions for better living. Students may work individually or in groups of up to four, including interdisciplinary topics, and assessment is based on the prescribed rubrics.

**Course Outcomes:** At the end of the course, the student will be able to:

| # | Course Outcomes                                                                                                                                         | Mapping to PO's  | Mapping to PSO's |
|---|---------------------------------------------------------------------------------------------------------------------------------------------------------|------------------|------------------|
| 1 | Identify and analyze societal problems through field interaction and technical assessment.                                                              | 1,2,3,4,6,9      | -                |
| 2 | Develop skills in project planning, field survey, data collection, implementation, documentation and reporting.                                         | 1,2,3,4,5,8,9,10 | -                |
| 3 | Apply principles of social responsibility in engineering practice through community-oriented interventions                                              | 1,2,3,5,6,7,10   | -                |
| 4 | Formulate feasible societal problem statements and solutions considering practical constraints and sustainability aspects.                              | 6, 7             | -                |
| 5 | Exhibit multidisciplinary learning and problem-solving ability based on collected data, user feedback and baseline conditions.                          | 2,3,4,5,8,9,11   | -                |
| 6 | Demonstrate teamwork and communication skills while interacting with technical and non-technical stakeholders and reflect on project impact on society. | 6,8,9,10,11      | -                |

**Restrictions and professional conduct:**

Community / Societal Projects shall remain **academic, socially responsible, technically focused, and politically neutral**. Students and faculty shall maintain professionalism, ethical conduct, public respect and institutional integrity while interacting with communities, public groups, organizations and stakeholders. Students and faculty shall avoid the following during project execution:

- Association with political party activities, campaigns or propaganda.
- Participation in activities that may disturb communal harmony, public order or institutional reputation.
- Use of the project platform for personal, political, ideological or commercial promotion.
- Disrespectful, discriminatory or unethical interaction with community members or stakeholders.

Projects must also recognize constraints related to cost, resources, environment and safety, and stakeholder behavior/cooperation/acceptance when planning and implementing activities.

**MALNAD COLLEGE OF ENGINEERING, HASSAN**  
**(An Autonomous Institution Affiliated to VTU, Belagavi)**  
**DEPARTMENT OF COMPUTER SCIENCE AND BUSINESS SYSTEMS**

**SET OF PROJECT ACTIVITIES (TW/SL = 30 HOURS)**

Students may identify the project topic using one or more of the following methods:

- Interaction with local rural or urban stakeholders such as local leaders, corporation/municipality personnel, NGOs, panchayat representatives, etc.
- Review of issues highlighted in print and electronic media, and social networks (WhatsApp, Facebook, X, Instagram, etc.).
- After selecting a broad topic, students shall collect data, conduct a feasibility survey, estimate timelines and resources, approximate expenditure, and then define the problem statement and objectives clearly.

**List of Project Topics and Engineering Outcomes:**

The following structured sequence of activities is to be carried out during the semester:

**Methods for Project Identification:**

Students may identify the project topic using one or more of the following methods:

- Interaction with local rural or urban stakeholders such as local leaders, corporation/municipality personnel, NGOs, panchayat representatives, etc.
- Review of issues highlighted in print and electronic media, and social networks (WhatsApp, Facebook, X, Instagram, etc.).
- After selecting a broad topic, students shall collect data, conduct a feasibility survey, estimate timelines and resources, approximate expenditure, and then define the problem statement and objectives clearly.

**List of Project Topics and Engineering Outcomes:**

The following structured sequence of activities is to be carried out during the semester:

| Sl.No | Project Title                                                 | Measurable Engineering Outcome                                                                                                               | Mapped POs | SDGs |
|-------|---------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------|------------|------|
| 1.    | Computer-Based Learning Tool for Mentally Challenged Students | Design and develop a web/browser based learning tool as per the requirements of the special school.                                          | 5, 6       | 4    |
| 2.    | Medication management system for an old age home              | Design and develop a web-based application to monitor the administration of medicine to senior citizens residing at an old-age home.         | 6          | 3    |
| 3.    | Virtual Labs for Learning Science                             | Design and Development of simulation environment to do the experimentation list in Physics/Chemistry/Biology for high school in a rural area | 5, 6       | 4    |

|     |                                                           |                                                                                                                                                                                                                                                |   |           |
|-----|-----------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---|-----------|
| 4.  | Local Skill Development and Employment Information Portal | Design and develop a web-based portal that provides information on local skill development programs, vocational training, internships, and employment opportunities for youth in the community.                                                | 6 | 4, 8      |
| 5.  | Digital Complaint Portal for Gram Panchayat               | Design and develop a web-based complaint portal (Specific nature) for Gram Panchayat                                                                                                                                                           | 6 | 16        |
| 6.  | Plant Care Reminder Application                           | Implement a reminder mechanism that generates timely notifications for watering, fertilizing, pruning, and other plant-care activities.                                                                                                        | 6 | 13, 15    |
| 7.  | Basic Crop Recommendation System                          | Develop a basic crop recommendation system that recommends suitable crops based on user-provided parameters such as soil type, season, rainfall, and water availability                                                                        | 6 | 2, 13, 15 |
| 8.  | Lost and Found Application                                | Develop a lost and found application that enables users to report, search, and manage lost and found items                                                                                                                                     | 6 | 11, 16    |
| 9.  | Campus Navigation System                                  | Develop a campus navigation system that enables users to locate important campus facilities and obtain directions between selected locations, which provides a simple digital map and location information for important facilities on campus. | 6 | 15        |
| 10. | Public Waste Collection Monitoring System                 | Design and develop a web/mobile application that enables citizens to report uncollected garbage with geo tagged photos, track complaint status, and assist local municipal authorities in monitoring waste collection and sanitation services. | 6 | 3, 11, 16 |
| 11. | Volunteer Management System for NGOs                      | Develop a web-based system to manage volunteer registration, event scheduling, attendance, and activity reporting for NGOs.                                                                                                                    | 6 | 16        |
| 12. | Local Farmer Market Information System                    | Design and develop a digital platform that connects farmers directly with consumers by providing crop availability, prices, and contact information.                                                                                           | 6 | 2, 8, 12  |

|     |                                                                                                  |                                                                                                                                                                                                                                                                                   |      |           |
|-----|--------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|-----------|
| 13. | Government scheme awareness for betterment of livelihood                                         | Design a UI in the native language for people in rural areas to make best utilization of the government scheme.                                                                                                                                                                   | 6    | 11        |
| 14. | Community Renewable Energy Awareness and Management Portal                                       | Design and develop a web/mobile portal to provide information on renewable energy resources and estimate energy savings within the community.                                                                                                                                     | 6    | 7, 11, 13 |
| 15. | Digital Learning Platform for Rural Government Schools                                           | Design and develop a digital learning platform (Tool) that provides interactive learning content and activity-based learning materials in regional languages for rural and small village govt schools (primary govt. schools often lack interactive learning tools)               | 5, 6 | 4         |
| 16. | Digital Heritage Preservation and Cultural Information Portal                                    | Develop a digital platform to document, preserve, and promote local heritage sites, cultural events, and historical information                                                                                                                                                   | 6    | 11, 16    |
| 17. | Community Disaster Preparedness and Emergency Information System                                 | Design and develop a web/mobile application for disaster preparedness and emergency alerts during natural disasters.                                                                                                                                                              | 6    | 11, 13    |
| 18. | Pesticide Usage Advisory and Organic Farming Awareness System                                    | Design and develop an application that provides recommendations on appropriate pesticide usage, promotes organic farming practices, and suggests suitable organic alternatives based on soil test reports and crop information.                                                   | 6    | 2, 3, 15  |
| 19. | Cyber Security Awareness Platform for Phishing, Digital Arrest Scams, and Malicious Applications | Create a simple web app where users paste suspected text/links to get a risk score based on known phishing patterns, deceptive URLs, and high-risk keywords                                                                                                                       | 5, 6 | 16        |
| 20. | Local Public Transportation Information and Route Assistance System                              | Design and develop a web or mobile application that provides location based information on available public transportation services, route maps, estimated travel options, and nearby transport facilities to improve accessibility and promote the use of public transportation. | 6    | 11, 15    |
| 21. | Digital Inventory and Sales Management System                                                    | Design and develop a web-based inventory, billing, and sales analytics system for small businesses with dashboard reports and low-stock alerts.                                                                                                                                   | 6    | 8, 9      |

**DEPARTMENT OF COMPUTER SCIENCE AND BUSINESS SYSTEMS**

|     |                                                             |                                                                                                                                                                                                             |   |            |
|-----|-------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---|------------|
| 22. | Smart Financial Literacy and Budget Planner for public      | Develop a mobile/web application that helps users manage household budgets, savings, government schemes, and financial planning through support.                                                            | 6 | 1, 8       |
| 23. | Local Business Promotion and Market Analytics Portal        | Design a digital platform that enables local vendors and small businesses to advertise products, analyze customer trends, and improve digital visibility.                                                   | 6 | 8, 9       |
| 24. | Blood Donor and Emergency Blood Availability Portal         | Develop a web/mobile platform to connect blood donors, hospitals, and patients with real-time blood availability information.                                                                               | 6 | 3          |
| 25. | Women Safety and Emergency Alert Application                | Develop a mobile application with SOS alerts, live location sharing, emergency contacts, and nearby police station information.                                                                             | 6 | 5, 11, 16  |
| 26. | Public Grievance and Civic Issue Reporting System           | Develop a web/mobile application that allows citizens to report civic issues such as potholes, streetlight failures, and drainage problems and monitor complaint resolution status.                         | 6 | 11, 15, 16 |
| 27. | Digital Public Library and Book Exchange System             | Design and develop a web-based platform that enables community members or schools to manage book donations, borrowing, returns, and book exchange activities                                                | 6 | 4          |
| 28. | Community Water Quality Reporting and Awareness Portal      | Design and develop a web-based portal for citizens to report drinking water issues, record simple water quality observations, and provide awareness on safe water practices through educational resources.  | 6 | 3, 6       |
| 29. | Community Blood Donor Registry and Emergency Request System | Design and develop a web/mobile application that maintains a local blood donor database, enables emergency blood requests, and notifies eligible donors based on blood group and location.                  | 6 | 3, 11      |
| 30. | Smart Community Health Camp Management System               | Design and develop a web/mobile application to manage community health camps by facilitating online patient registration & doctor scheduling/digital health record maintenance/medicine inventory tracking. | 6 | 3          |

|     |                                                                       |                                                                                                                                                                                                                            |   |           |
|-----|-----------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---|-----------|
| 31. | Food Waste Reduction and Food Donation Platform                       | Develop a platform connecting restaurants, hotels, and households with NGOs to donate surplus food before it is wasted.                                                                                                    | 6 | 2, 12     |
| 32. | Community Tree Plantation and Green Cover Monitoring Portal           | Develop a web/mobile application to record tree plantation activities.                                                                                                                                                     | 6 | 13, 15    |
| 33. | Career Guidance and Information Portal                                | Develop an app to get information on aptitude tests, Course/scholarship alerts/placement information                                                                                                                       | 6 | 4, 8      |
| 34. | NGO Donation and Resource Management System                           | Develop a web application to manage donations, inventory, volunteers, and financial transparency for NGOs.                                                                                                                 | 6 | 16        |
| 35. | Smart Local Tourism Business Portal                                   | Develop a web platform promoting local tourism, homestays, guides, and cultural businesses with booking facilities.                                                                                                        | 6 | 8, 11, 15 |
| 36. | Local Artisan and Handicraft Marketplace                              | Design and develop a platform promoting local artisans and traditional handicraft products.                                                                                                                                | 6 | 8, 11     |
| 37. | Waste Recycling Marketplace                                           | Develop a digital platform connecting households, recyclers, and scrap collectors with pickup scheduling.                                                                                                                  | 6 | 11, 12    |
| 38. | Digital Accessibility Evaluation and Improvement for Public Websites  | Evaluate the accessibility of at least 10 government or public-service websites using WCAG guidelines, develop accessibility improvement recommendations, and implement a prototype demonstrating compliance improvements. | 6 | 16        |
| 39. | Digital Library and Knowledge Sharing Platform for Government Schools | Develop a multilingual digital library with e-books, educational videos, and quizzes to improve access to learning resources.                                                                                              | 6 | 4         |
| 40. | Community Renewable Energy Awareness and Management Portal            | Design and develop a web/mobile portal to provide information on renewable energy resources and promote the adoption of sustainable energy practices within the community.                                                 | 6 | 7, 11, 15 |
| 41. | Local Business Digital Marketplace                                    | Web portal onboarding of at least 25 local vendors and product catalog.                                                                                                                                                    | 6 | 8, 12     |
| 42. | Community Blood Donor and Emergency Volunteer Network                 | Web/mobile application connecting donors and volunteers.                                                                                                                                                                   | 6 | 3         |

|     |                                                                |                                                                                                                                                               |      |       |
|-----|----------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|------|-------|
| 43. | Mental Health Awareness and Helpline Directory App             | Develop an application providing verified helpline contacts, self-help resources, and stigma-reducing content.                                                | 6    | 3     |
| 44. | Diet & Nutrition Awareness Tool for Anganwadi Children         | Develop an application to track and suggest balanced meal plans for children under a nutrition scheme.                                                        | 5, 6 | 2, 3  |
| 45. | Digital Literacy Portal for Elderly Citizens                   | Develop a simplified, accessible web application teaching basic smartphone and internet skills to senior citizens.                                            | 6    | 4, 11 |
| 46. | Scholarship & Government Scheme Eligibility Checker            | Develop a Web tool matching students to eligible scholarships and welfare schemes based on entered criteria.                                                  | 5, 6 | 4     |
| 47. | Digital Record keeping system for self help groups             | Develop a ledger and record keeping application to help women's SHGs manage savings, loans and meeting records                                                | 6    | 5, 8  |
| 48. | Elderly Companion & Wellness Check-In App                      | Develop an application enabling family/volunteers to schedule and log wellness check-ins for the elderly living alone.                                        | 6    | 3     |
| 49. | Old-Age Home Volunteer Coordination Portal                     | Develop a platform matching volunteers with old-age homes for scheduled visits, events, and support activities.                                               | 6    | 3, 11 |
| 50. | Local Job & Skill Matching Portal for Daily-Wage Workers       | Develop a Web application connecting unskilled and semi-skilled workers with nearby job opportunities.                                                        | 6    | 8     |
| 51. | Street Vendor Digital Registry and Support Portal              | Develop an application for the registry helping street vendors to access municipal registration information and gain customer visibility.                     | 6    | 8     |
| 52. | Microloan and Repayment Tracker for Small Vendors              | Develop an application helping small vendors track micro-loans, repayments, and daily sales.                                                                  | 6    | 8     |
| 53. | Rainwater Harvesting Feasibility & Awareness Tool              | Develop a tool estimating rooftop rainwater harvesting potential based on roof area and local rainfall data.                                                  | 5, 6 | 6, 13 |
| 54. | Water Quality Reporting System for a Village / Ward            | Develop a Web/mobile application for citizens to report water contamination issues and track resolution status.                                               | 6    | 6     |
| 55. | Community Skill-Building Workshop Registration and Tracker App | Develop an application to register participants and track attendance for community skill-building workshops such as tailoring, computer usage, and first-aid. | 6    | 4, 11 |

|     |                                                                |                                                                                                                         |      |       |
|-----|----------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------|------|-------|
| 56. | Local Event & Festival Information Aggregator App              | Develop an application aggregating community event and festival schedules for a town or ward.                           | 6    | 11    |
| 57. | Community Sports Ground / Facility Booking App                 | Develop an application for local youth to check availability and book shared sports grounds or courts.                  | 6    | 3, 11 |
| 58. | Talent Scouting Platform for Rural Sports Players              | Develop a platform where local sports talent can register profiles and gain visibility to coaches and scouts.           | 6    | 3     |
| 59. | Youth Skill Development and Internship Finder App              | Develop an application listing local internships, apprenticeships, and skill-training programs for youth.               | 6    | 4, 8  |
| 60. | Financial Literacy Awareness App for Rural Households          | Develop an application teaching basic banking, savings, and fraud-avoidance concepts with local-language support.       | 6    | 4, 8  |
| 61. | Legal Aid & Rights Awareness Portal                            | Develop a portal listing free legal aid contacts with simplified explanations of common citizen legal rights.           | 6    | 16    |
| 62. | Digital Insurance / Pension Scheme Awareness Tool              | Develop a tool helping unorganized-sector workers check eligibility and enroll in government insurance/pension schemes. | 5, 6 | 8     |
| 63. | Livestock Health Record and Vaccination Tracker                | Develop an application to record cattle and livestock health history and vaccination schedules for farmers.             | 6    | 15    |
| 64. | Soil Testing Appointment & Report Access Portal                | Develop a portal letting farmers book soil-testing slots and access digital test reports.                               | 6    | 15    |
| 65. | Power Outage Reporting and Tracking App for a Locality         | Develop an application allowing residents to report and track power outages to the local utility board.                 | 6    | 7, 11 |
| 66. | Community Borewell / Water Tanker Scheduling App               | Develop an application to schedule and track water tanker deliveries for water-scarce localities.                       | 6    | 6, 11 |
| 67. | Cyber Safety and Digital Fraud Awareness App                   | Develop an application educating students and senior citizens on common online scams and safe digital practices.        | 6    | 16    |
| 68. | Adult Literacy Program Registration and Progress Tracker       | Develop an application to register learners and track attendance and progress in a community adult-literacy drive.      | 6    | 4     |
| 69. | Inclusive Learning Content Tool for Differently Abled Students | Develop a tool delivering audio/visual learning content adapted for students with visual or hearing impairments.        | 5, 6 | 4     |

|     |                                                    |                                                                                                                                                                                   |      |        |
|-----|----------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|--------|
| 70. | School Dropout Tracking and Follow-up System       | Develop an application for teachers to record attendance trends and flag/follow up on students at risk of dropping out.                                                           | 6    | 4      |
| 71. | Public Park / Garden Maintenance Complaint Tracker | Develop an application for citizens to report maintenance issues in public parks and gardens and track resolution.                                                                | 6    | 11, 15 |
| 72. | Digital Suggestion Box for Local Governance        | Develop an application allowing citizens to submit suggestions and feedback to local governing bodies on civic matters.                                                           | 5, 6 | 16     |
| 73. | Community Health Screening Camp Scheduler          | Develop an application to schedule and manage attendance for community blood-pressure/diabetes screening camps.                                                                   | 6    | 3      |
| 74. | Digital Queue Management System for Health Camps   | Develop a token-based appointment and queue management system/application for health camps.                                                                                       | 6    | 3      |
| 75. | Streetlight Fault Reporting System                 | Develop an application for citizens to report faulty streetlights using photographs and GPS location.                                                                             | 6    | 11     |
| 76. | Village Asset Mapping System                       | Develop a GIS-enabled or map-based application to document community assets such as schools, hospitals, water tanks, and roads.                                                   | 6    | 11     |
| 77. | Food Waste Reduction & Expiry Management System    | Design and develop a web/mobile application to record food items, monitor expiry dates, provide expiry reminders, and maintain food inventory to help reduce food wastage.        | 6    | 2, 12  |
| 78. | Community Hall Booking & Management System         | Design and develop a web-based platform to manage community hall bookings, track hall availability, process booking requests, schedule maintenance, and maintain booking records. | 6    | 11     |
| 79. | Public Infrastructure Asset Monitoring System      | Design and develop a web-based platform to maintain records of public infrastructure assets, report maintenance issues, assign maintenance requests, and track their status.      | 6    | 9, 11  |

**Assessment structure:**

**A. Continuous Internal Evaluation (CIE) – 50 marks**

- Students, in batches of 3–4, shall undertake at least one project (or a combination of two related activities) aiming, as far as possible, at a logical implemented or implementable outcome.
- CIE will be conducted by a departmental committee (HoD/nominee, guide and one senior faculty) using the following rubrics totaling 50 marks:

**B. Semester End Examination (SEE) – 50 marks**

- The SEE shall be conducted batch-wise by a committee of : one faculty from the same

**MALNAD COLLEGE OF ENGINEERING, HASSAN**  
**(An Autonomous Institution Affiliated to VTU, Belagavi)**  
**DEPARTMENT OF COMPUTER SCIENCE AND BUSINESS SYSTEMS**

department and one from a different department.

**CIE and SEE Rubrics**

| Criterion                                                                                 | Weight (marks) | Excellent (Full marks)                                                                            | Good                                                                      | Fair                                                                     | Needs Improvement                                                 |
|-------------------------------------------------------------------------------------------|----------------|---------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------|--------------------------------------------------------------------------|-------------------------------------------------------------------|
| <b>Problem identification &amp; Relevance to society/industry/community</b>               | 8              | Problem is clearly identified with strong evidence of societal relevance and well-defined scope.  | Problem is relevant and scope is clear with adequate supporting evidence. | Problem defined but justification or evidence is weak.                   | Problem unclear or not relevant; little/no supporting evidence.   |
| <b>Formation of problem statement; Engineering approach, innovation &amp; feasibility</b> | 10             | Problem statement is precise; approach is sound, innovative and clearly feasible.                 | Problem statement adequate; approach feasible with minor gaps.            | Problem statement partial; approach feasibility is marginal.             | Problem statement missing or approach not feasible.               |
| <b>Interaction with stakeholders; Data collection, analysis &amp; interpretation</b>      | 8              | Thorough stakeholder engagement; data collection is comprehensive ; analysis is well-interpreted. | Good engagement; data analysis adequate with minor gaps.                  | Limited engagement; data incomplete and analysis superficial.            | Little/no stakeholder contact; insufficient or no data/analysis.  |
| <b>Project documentation; Clarity, organization &amp; problem-solving demonstrated</b>    | 10             | Documentation is complete, well-organized, analytical, and shows strong problem-solving.          | Documentation complete and clear with some analytical content.            | Documentation on basic with omissions; problem-solving limited.          | Documentation missing/poorly organized; no clear problem-solving. |
| <b>Communication &amp; Presentation skills</b>                                            | 6              | Presentation is confident, structured, and answers queries fully; visuals effective.              | Presentation clear and satisfactory; responds to most queries.            | Presentation acceptable but lacks clarity or confidence; weak responses. | Presentation poor or absent; unable to respond.                   |

| Entrepreneurship and businesses are the basis for economic growth all over the world. They play an important role in employment, income and societal changes, particularly in transition economies.                                                                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                         |                       |                        |

| Relationship types, Relationship Sets, Roles and Structural Constraints; Weak Entity Types; ER Diagrams,. <b>Relational Model and Relational Algebra:</b> Relational Model Constraints and Relational Database Schemas; Update Operations, Transactions and dealing with constraint violations; Unary Relational Operations: SELECT and PROJECT                                                        |                                                                                                                           |                       |                        |
| <b>Module 3</b>                                                                                                                                                                                                                                                                                                                                                                                        |                                                                                                                           |                       | <b>6 Hours</b>         |
| Relational Algebra Operations from Set Theory; Binary Relational Operations: JOIN-variations of JOIN, OUTER JOIN operations. <b>SQL:</b> SQL Data Definition and Data Types; Specifying basic constraints in SQL; Basic Retrieval queries in SQL; Insert, Delete and Update statements in SQL; Additional features of SQL, more complex SQL Retrieval Queries; Views; Schema Change Statements in SQL. |                                                                                                                           |                       |                        |
| <b>Module 4</b>                                                                                                                                                                                                                                                                                                                                                                                        |                                                                                                                           |                       | <b>6 Hours</b>         |
| <b>Database Design:</b> Informal Design Guidelines for Relation Schemas; Functional Dependencies; Normal Forms Based on Primary Keys-1NF, 2NF, 3NF, Boyce-Codd Normal Form. Multi-valued Dependencies and Fourth Normal Form; <b>Transaction Management:</b> The ACID Properties, Lock based Concurrency control techniques: Two- Phase Locking Techniques for Concurrency control.                    |                                                                                                                           |                       |                        |

**MALNAD COLLEGE OF ENGINEERING, HASSAN**  
**(An Autonomous Institution Affiliated to VTU, Belagavi)**  
**DEPARTMENT OF COMPUTER SCIENCE AND BUSINESS SYSTEMS**

**Self -Study Components:**

Real-world applications of ER modeling and schema design, Differences between Relational Algebra and SQL, Exploring NoSQL vs Relational DBMS, Hands-on practice with online SQL platforms (e.g., SQLZoo, W3Schools SQL), ACID properties and isolation levels in DBMS

**Tutorial Component**

1. Design an Employee database and answer following queries:
  - a) List all the employees who are above 40 years of age
  - b) List the employees who work in a particular department
  - c) List the female employees who are 30 years of age and drawing salary >8000
  - d) List the employee number, employee name and his department name of all employees
2. Design a video parlour database and solve the following queries as outlined below using SQL.
  - a) List only videos in the Children category with a daily rental rate of less than 100 and sorted according to video title.
  - b) List the catalogNo, title and category of the Video table, ordered by video title
  - c) List all videos with a certification of “U” or “B” in the Video table.
3. Consider the Insurance database. Create the tables by properly specifying the primary keys and the foreign keys, Enter at least five tuples for each relation.
  - a) Demonstrate how you
    - i. Update the damage amount for the car with a specific regno in accident with report number 12 to 25000
    - ii. Add a new accident to the database
  - b) Find the total number of people who owned cars that were involved in accidents in 2006.
  - c) Find the number of accidents in which cars belonging to a specific model were involved.
4. Consider the database of student enrollment in courses and books adopted for each course.
  - a) Demonstrate how you add a new text book to the database and make this book be adopted by some department.
  - b) Produce a list of text books( include course # ,book\_isbn, book-title) in the alphabetical order for courses offered by the cs department that use more than 2 books.
  - c) List the department that has adopted books published by specific publisher.
5. Consider an order processing database application in a company. Create the tables by properly specifying the primary keys and the foreign keys. Enter at least five tuples for each relation.
  - a) Produce a listing: CUSTNAME, NO\_OF\_ORDERS, and AVG\_ORDER\_AMT, where the middle column is the total number of orders by the customer and the last column is the average order amount for that customer.
  - b) List the Order# for the orders that were shipped from all the warehouses that the company has in a specific city.
  - c) Demonstrate how you delete a customer from the CUSTOMER table and make that field null in the ORDER table.

**(An Autonomous Institution Affiliated to VTU, Belagavi)**  
**DEPARTMENT OF COMPUTER SCIENCE AND BUSINESS SYSTEMS**

6. Design a relational database for a real estate agency. It should store information about houses for sale, seller information, Buyer information, agents information (who can act on behalf of either the buyer or the seller), and the sale of houses. Answer the following queries in SQL.
- What are the ids, addresses, asking\_price, and selling\_price of all houses that sold for less than the asking price?
  - What are names of all of (prospective) buyers who have not bought a house? Each name should appear only once.
  - Find the addresses and asking prices of all houses that have at least 3 bedrooms and two bathrooms that have not sold. Each address, asking price pair should appear only once.
7. Consider the details maintained by a book dealer. Create the tables by properly specifying the primary keys and the foreign keys. Enter at least five tuples for each relation.
- Give the details of the authors who have 2 or more books in the catalog and the price of the books is greater than the average price of the books in the catalog and the year of publication is after 2000.
  - Find the author of the book which has maximum sales.
  - Demonstrate how you increase the price of books published by a specific publisher by 10%.
8. Consider the following schema:  
Suppliers( sid: integer, sname: string, address: string)  
Parts(pid: integer, pname: string, color: string)  
Catalog( sid: integer, pid: integer, cost: real)  
Design a database to satisfy the above requirements and answer the following queries
- Find the names of parts for which there is some supplier.
  - Find the names of suppliers who supply every part.
  - Find the id's of suppliers who supply red parts.

|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|
| <b>ABL 1 – Design and Simulation of Automata Models (15 Hours)</b><br>1. Select real-world pattern recognition or lexical analysis problems to model using Finite Automata – 2 hrs<br>2. Design and simulate Deterministic and Non-deterministic Finite Automata (DFA & NFA) for simple inputs – 5 hrs<br>3. Apply Epsilon-transitions and convert NFA to DFA – 3 hrs<br>4. Construct and test Regular Expressions for token validation (e.g., identifier, number, keyword) – 3 hrs<br>5. Document the automaton, transitions, and use cases with input/output validation – 2 hrs | <b>15</b> |
| <b>ABL 2 – Grammar Construction and PDA/TM Simulation (12 Hours)</b><br>1. Construct Context-Free Grammars (CFGs) for arithmetic expressions and nested structures – 3 hrs<br>2. Design Parse Trees and test ambiguity in CFGs – 2 hrs<br>3. Implement Pushdown Automata (PDA) for balanced parentheses and palindromes – 3 hrs<br>4. Convert CFG to CNF and simulate PDA equivalence – 2 hrs<br>5. Demonstrate a basic Turing Machine operation using visual tools (e.g., TM simulator) – 2 hrs                                                                                  | <b>12</b> |
| <b>Total Learning Hours/Semester</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <b>27</b> |

|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------|------------------------|
| 1.         | Apply concepts of data-types, selection and looping constructs of Julia programming language.                                                                 | 1,2                   | -                      |
| 2.         | Demonstrate the use of strings, functions, arrays and matrix operations in solving problems.                                                                  | 2,5                   | -                      |
| 3.         | Develop programs involving data structures to handle multi-valued data items. Make use of packages to generate plots of mathematical functions and equations. | 3,6                   | -                      |

**List of Experiments:**

**PART-A**

|    |                                                                                                                                                                                                                                                                                                                                 |
|----|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1  | a. Develop a Julia program to simulate a calculator (for integer and real numbers).<br>b. Develop a Julia program to add, subtract, multiply and divide complex numbers.                                                                                                                                                        |
| 2  | Develop a Julia program for the following problem: A computer repair shop charges \$100 per hour for labour plus the cost of any parts used in the repair. However, the minimum charge for any job is \$150. Prompt for the number of hours worked and the cost of parts (which could be \$0) and print the charge for the job. |
| 3  | Develop a Julia program which reads numbers from a file (input.txt) and finds the largest number, smallest number, count, sum and average of numbers.                                                                                                                                                                           |
| 4  | a. Develop a Julia program and two separate functions to calculate GCD and LCM.<br>b. Develop a Julia program and a recursive function to calculate factorial of a number.                                                                                                                                                      |
| 5  | Develop a Julia program which reads a string (word) and prints whether the word is palindrome.                                                                                                                                                                                                                                  |
| 6  | Develop a Julia program to determine and print the frequency with which each letter of the alphabet is used in a given line of text.                                                                                                                                                                                            |
| 7  | Given a line of text as input, develop a Julia program to determine the frequency with which each letter of the alphabet is used (make use of dictionary)                                                                                                                                                                       |
| 8  | Develop a Julia program to evaluate expressions consisting of rational, irrational number and floating- point numbers)                                                                                                                                                                                                          |
| 9  | Develop a Julia program to determine addition and subtraction of two matrices (element -wise).                                                                                                                                                                                                                                  |
| 10 | a. Develop a Julia program to generate a plot of (solid & dotted) a function: $y=x^2$ (use suitable data points for x).<br>b. Develop a Julia program to generate a plot of mathematical equation: $y = \sin(x) + \sin(2x)$ .                                                                                                   |

**PART-B**

|    |                                                                                                                                                                                                                                                                                                                                                                                                                             |
|----|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. | Develop a Julia program to evaluate expressions having mixed data types (integer, real, floating-point number and complex).                                                                                                                                                                                                                                                                                                 |
| 2. | following: If hours worked is less than or equal to 40, regular pay is calculated by multiplying hours worked by rate of pay, and overtime pay is 0. If hours worked is greater than 40, regular pay is calculated by multiplying 40 by the rate of pay, and overtime pay is calculated by multiplying the hours in excess of 40 by the rate of pay by 1.5. Gross pay is calculated by adding regular pay and overtime pay. |
| 3. | An amount of money P (for principal) is put into an account which earns interest at r% per annum. So, at the end of one year, the amount becomes $P + P \times r/100$ . This becomes the principal for the next year. Develop a                                                                                                                                                                                             |

**MALNAD COLLEGE OF ENGINEERING, HASSAN**  
**(An Autonomous Institution Affiliated to VTU, Belagavi)**  
**DEPARTMENT OF COMPUTER SCIENCE AND BUSINESS SYSTEMS**

Julia program to print the amount at the end of each year for the next 10 years. However, if the amount ever exceeds 2P, stop any further printing. Your program should prompt for the values of P and r.

4. Develop a Julia program and a recursive function to generate Fibonacci series.
5. Develop a Julia program which reads and prints the words present in a file (input.txt) having Random Data in which words are dispersed randomly (Assumption: a word is a contiguous sequence of letters. A word is delimited by any non-letter character or end-of-line).
6. A survey of 10 pop artists is made. Each person votes for an artist by specifying the number of the artist (a value from 1 to 10). Develop a Julia program to read the names of the artists, followed by the votes, and find out which artist is the most popular.
7. Develop a Julia program to fetch words from a file with arbitrary punctuation and keep track of all the different words found (make use of set and ignore the case of the letters: e.g. to and To are treated as the same word)
8. Develop a Julia program to determine the following properties of a matrix: determinant, inverse, rank, upper & lower triangular matrix, diagonal elements, Euclidean norm and Square Root of a Matrix.
9. Develop a Julia program to perform multiplication operation on matrices: scalar multiplication, element-wise multiplication, dot product, cross product.
10. Develop a Julia program to generate multiple plots of mathematical equations:  $y = \sin(x) + \sin(2x)$  and  $y = \sin(2x) + \sin(3x)$

**PART- B**

1. A retail organisation has sales data stored across multiple Excel and CSV files. Import, combine, clean, and transform the data in Power BI to create a consolidated analytical dataset.
2. A company wants to understand its monthly business performance. Design a report that compares revenue, cost, profit, profit margin, and growth across products, regions, and time periods.
3. Examine a dataset containing missing values, duplicate records, inconsistent formats, and incorrect data types. Use Power Query to identify and resolve the data-quality issues.
4. A business maintains separate tables for customers, products, sales, employees, and locations. Develop an appropriate data model by defining relationships and organising the tables using a suitable schema.
5. Create calculated columns and DAX measures to analyse year-to-date sales, previous-year sales, percentage growth, average order value, rankings, and contribution to total revenue.
6. A sales manager requires different visual perspectives of the same dataset. Select appropriate charts, tables, maps, cards, and KPIs, and justify why each visual is suitable for the information presented.
7. Develop an interactive report that allows users to explore data using slicers, drill-down, drill-through, tooltips, bookmarks, buttons, and page navigation.
8. Analyse customer data to identify purchasing behaviour, high-value customers, inactive customers, regional preferences, and important customer segments.
9. A senior manager requires a single-page executive dashboard. Present the most important performance indicators, trends, exceptions, targets, and actionable findings without overcrowding the report.

Build and publish a complete Power BI solution using a real-world dataset, including data preparation, modelling, DAX calculations, visualisation, dashboard design, report sharing, and interpretation of findings.

**(An Autonomous Institution Affiliated to VTU, Belagavi)**  
**DEPARTMENT OF COMPUTER SCIENCE AND BUSINESS SYSTEMS**

7. A graphic designer requires an extended desktop across two monitors. Configure the display settings and adjust the resolution, orientation, and display mode.
8. A newly established computer laboratory requires all peripheral devices to be installed and configured. Connect and configure the keyboard, mouse, printer, and scanner and verify their operation.
9. A desktop computer frequently restarts and displays error messages. Use diagnostic tools to identify hardware faults related to memory, storage, temperature, or power supply.
10. Before upgrading the operating system in a computer laboratory, create a complete system backup and demonstrate system restoration after a simulated failure.

**DEPARTMENT OF COMPUTER SCIENCE AND BUSINESS SYSTEMS**

**PART-B**

1. A research laboratory is adopting LaTeX for preparing technical reports and publications. As a research assistant, install and configure a LaTeX environment using Overleaf, TeXstudio, or MiKTeX/TeX Live and verify the installation by compiling a sample document.
2. A faculty member asks you to prepare a simple document for a laboratory manual. Create a basic LaTeX document that includes a title, sections, bold text, italic text, and multiple paragraphs.
3. A department handbook requires consistent formatting. Format the document by applying text alignment, paragraph indentation, bullet lists, numbered lists, and spacing options.
4. A student is preparing a project report containing multiple chapters and subtopics. Create a document with a title page, author information, sections, subsections, and an automatically generated table of contents.
5. An engineering student needs to prepare a document containing mathematical derivations for an assignment. Create a document containing inline equations, displayed equations, and numbered equations using the appropriate LaTeX environments.
6. A researcher wants to include experimental results and graphical outputs in a journal paper. Insert tables and figures with appropriate formatting, captions, labels, and references.
7. A thesis document contains multiple chapters, figures, and tables. Implement cross-referencing to enable automatic referencing of sections, tables, figures, and page numbers.
8. A postgraduate student is preparing a literature review for a research paper. Create a bibliography database using a .bib file, cite references within the document, and automatically generate the reference list using BibTeX.
9. A journal publisher provides specific formatting guidelines for article submission. Customize the document using packages such as geometry, graphicx, amsmath, and hyperref to satisfy the formatting requirements.
10. An engineering laboratory requires students to submit reports in a standardized format. Prepare a complete laboratory report containing a title page, abstract, introduction, methodology, results, equations, figures, tables, and references.
