## MALNAD COLLEGE OF ENGINEERING, HASSAN (An Autonomous Institution Affiliated to VTU, Belagavi)

# Autonomous Programmes Bachelor of Engineering

## DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

SYLLABUS III Semester & IV Semester (SECOND YEAR)

Academic Year 2023-24

## VISION

To become a prominent department of Computer Science & Engineering producing competent professionals with research and innovation skills, inculcating moral values and societal concerns.

## MISSION

- Impart world class engineering education to produce technically competent engineers.
- Provide facilities and expertise in advanced computer technology to promote research.
- Enhance Industry readiness and entrepreneurial abilities through innovative skills.
- Nurture ethical values and social responsibilities.

## **PROGRAM EDUCATIONAL OBJECTIVES**

| PEO 1 | : Graduates will be efficient software developers in diverse fields and will be       |
|-------|---|
|       | successful professionals and/or pursue higher studies.                                |
| PEO 2 | : Graduates will be capable to adapt to new computing technology for professional     |
|       | excellence and Research and will belifelong learners.                                 |
| PEO 3 | : Graduates will work productively exhibiting ethical qualities for the betterment of |
|       | society.  |
| PEO 4 | : Graduates will possess leadership qualities, work harmoniously in a team with       |
|       | effective communication skills  |
|       |   |

### **PROGRAM OUTCOMES**

#### Engineering Graduates will be able to:

- 1. **Engineering knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, andan engineering specialization to the solution of complex engineering problems.
- 2. **Problem analysis**: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- 3. **Design/development of solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- 4. **Conduct investigations of complex problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information toprovide valid conclusions.
- 5. **Modern tool usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.
- 6. **The engineer and society**: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- 7. Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
- 8. **Ethics**: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
- 9. **Individual and team work**: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- 10. Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
- 11. **Project management and finance**: Demonstrate knowledge and understanding of the engineering andmanagement principles and apply these to one's own work, as a member and leader in a team, to manageprojects and in multidisciplinary environments.
- 12. Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

## **PROGRAM SPECIFIC OUTCOMES (PSOs)**

Upon graduation, students with a degree B.E. in Computer Science & Engineering will be able to:

- **PSO 1:** To make the students industry ready by facilitating them with software tools in recent technologies
- **PSO 2:** To develop IT based solutions for problems in diverse domains

## Scheme & Syllabus for II Year

#### Activities:

- 1. To represent Sawtooth periodic motion of a follower operated by a Cam which rotates uniformly, in the form of Fourier series.
- 2. Application of Fourier series to Laplace equation, heat conduction.
- 3. Fourier series representation for the excitation described by the wave form,
- 4. Role of eigenvalues, eigenvectors in determining natural frequency, mode shapes of equations of motions (Spring mass system).

#### **Course Contents:**

#### **Practice Programs**

Execute basic UNIX commands, VI editor commands. File comparing commands.

#### **Exercise Programs**

- 1. a) Write a shell script to read a message "Good Morning" and display it 10 times at regular intervals of 60 seconds.
  - b) Write a shell script that accepts a string as a command line argument and reverse it.
- 2. a) Write a shell script to generate multiplication table.
  - b) Write a shell script to print sum of individual digits of a number.
- 3. a) Write a shell script to search a given pattern in file, if found display the message "Found" or else display "Not found". Accept the pattern and input file as command line arguments.
  - b) Write a shell script to accept the pattern and file to be used. If the pattern is not entered display a message "String not entered". If file name is not mentioned display appropriate message.
- 4. Write a shell script to check whether the given file as read and write and execute permission.
- 5. Write a shell script that searches a given string in a given file and prints the number of times it repeats, else display proper error message. The script should accept the file has command line argument.
- 6. Write a shell script to display all the process running in the system every 30 seconds for 5 times using a) while b) for.
- 7. Write a shell script that takes a command –line argument and reports on whether it is directory, a file, or something else.
- 8. Write a shell script that accepts one or more file name as arguments and converts all of them to uppercase, provided they exist in the current directory.
- 9. Write a shell script that deletes all lines containing a specified word in one or more files supplied as arguments to it
- 10. Write a shell script that computes the gross salary of an employee according to the following rules:
  i) If basic salary is < 1500 then HRA =10% of the basic and DA =90% of the basic. ii) If basic salary is >=1500 then HRA =Rs500 and DA=98% of the basic the basic salary is entered interactively through the key board.
- 11. Write a shell script that accepts two integers as its arguments and computes the value of first number raised to the power of the second number.

- 12. Write an interactive file-handling shell program. Let it offer the user the choice of copying, removing, renaming, or linking files. Once the user has made a choice, have the program ask the User for the necessary information, such as the file name, new name and so on.
- 13. Write shell script that takes a login name as command line argument and reports when that Person logs in.
- 14. Write a shell script which receives two file names as arguments. It should check whether the two file contents are same or not. If they are same then second file should be deleted.
- 15. Write a shell script to perform the following string operations:
  - i. To extract a sub-string from a given string.
  - ii. To find the length of a given string.
- 16. Write a menu driven shell script to perform the following:
  - i) List of users who are logged in
  - ii) List of files in the current directory
  - iii) List of processes of users
  - iv) Today's date
  - v) Quit to Unix

#### Activity:

Write and execute the following programs in java

- 1. Design Java application to model Employee of an "ABC" organization. Consider types of
  - employees as : a) Manager b) Sales Person Perform the following:
    - Implement simple inheritance where Employee (employee ID, First Name, Last Name, Current salary) is super class, consider Manager (number of stock options) and SalesPerson (number of sales, commission rate) as subclasses.
    - Define parameterized constructors in class hierarchy.
    - Define methods to display status of employee (override toString()) and increase current payment (salary) as giving bonus by a small amount.
- 2. Create class Employee with name, Id, cellNum, designation, department, salary permanent (boolean) as members. Also create separate class for member name as EmpName, department as Department and salary as Salary. Members of EmpName are firstName, midName, lastName . Members of Salary are BASIC, DA percent, HRA , PF, insurance. Members of Department are deptName, deptCode. Create an instance of Employee and initialize all its members from user input console. Access the same instance by more than one reference of Employee. Count the number of references and objects being created. [class, reference, objects].
- 3. Create a super class Bind  $\{x,y\}$  and subclass Bind3d  $\{z\}$  include
  - Parameterized constructor in class Bind to initialize object.
  - Include a method in class Bind to Print data members of object. Override the same method in sub¬class and reuse the inherited method in it.
  - Create final static member printArr (Bind[]) which print array of objects. In this method use above method to print member of individual objects of array.
  - Write test class to create to array of Bind3d type. Use the above method to print all theobjects of array.
- 4. A bank maintains two kinds of accounts Savings account and Current account. The savings account provides simple interest, deposit and withdrawal facilities. The current account only

provides deposit and withdrawal facilities. Current account holders should also maintain minimum balance. If balance falls below minimum level a service charge is imposed. Create an abstract class Account that stores customer name, account number type of account and abstract methods. From this derive the classes Curr Account (double balance, double min bal, double service Charge / penalty) and Sav\_Account (double balance).

Include the necessary methods in order to achieve the following:

Define parameterized constructor in a class hierarchy.

- Allow deposit and update the balance. •
- Display the balance.
- Compute interest and add to balance. •
- Permit withdrawal and update the balance (check for minimum balance).
- Apply polymorphism if required for methods in class hierarchy.
- Create an array of super class / object and populate with subclass objects and call the overridden /object methods.
- Write a test program to demonstrate the above said implementations.
- 5. Define an interface EMP Interface (void displayEMP(), void giveBonus (double amount)). Define an abstract class Employee(empID, fName, lName, salary). Define a concrete class Manager (noOfStockOptions), subclass of Employee and define interface methods. Perform the following:

- Define appropriate constructors in a class hierarchy.
- Ensure the bonus amount should not be negative and zero using exception handling mechanism (use throws and throw clauses of exception handling)

Create array of interface reference variables and populate with manager objects. Write a test program to implement the above said requirements of interface implementation and exception handling.

separate vector, which includes patient details such as patient ID, name, age, and medical condition. Write an R program to create data frame from these four vectors. After creating the data frame, you must save the data frame into a file to ensure data preservation and future access.

- 8. As a programmer at the digital security company, you have been assigned a critical task related to number encryption. Your task is to create an R program that calculates the sum of the digits of a given number using various looping techniques.
- 9. Create employee .CSV file having attributes such as Eid, name, salary, start\_date and department. Perform various operation such as Reading, writing and analyzing (no. of rows and columns, max salary with and without person, specific department, joined on or before specific date)
- 10. As a teacher at a high school, you recently conducted a quiz for your students on five different subjects: Mathematics, English, Science, History, and Geography. Write an R program to create a simple bar plot for these five subjects to present the performance of your students.

#### **Course Contents:**

#### Guided Laboratory Experiments

- 1. In a company, 30 employee details (name, Date of Joining, Qualification, and Salary) are stored in Microsoft Access Database and text file. Using Excel tool import the data from different sources for analysis.
- 2. Suppose a class of size 40 having SGPA of 8 semesters between 5 to 10. Calculate the CGPA of each student in below Grade form:

| 0      | S       | А       | В       | С          |
|--------|---------|---------|---------|------------|
| 100>=9 | 8 - 8.9 | 7 – 7.9 | 6 – 6.9 | 5 –<br>5.9 |

3. Create 10 students name in the form of First name, Middle name and Last name. Concatenate all the names and store in one column and also find the length of each name.

| 4. | Suppose y | our custo | mer survey | results fro | om the e | east and | west regions, | month wise are |
|----|-----------|-----------|------------|-------------|----------|----------|---------------|----------------|
|    |           |           |            |             |          |          |               |                |

| Month  | East  | West  | Low (<50%) | Medium (50%-80%) | High (>80%) |
|--------|-------|-------|------------|------------------|-------------|
| Apr-15 | 86.4% | 63.0% | 50%        | 30%              | 20%         |
| May-15 | 45.8% | 58.9% | 50%        | 30%              | 20%         |
| Jun-15 | 44.1% | 81.6% | 50%        | 30%              | 20%         |
| Jul-15 | 77.6% | 86.1% | 50%        | 30%              | 20%         |
| Aug-15 | 80.7% | 95.0% | 50%        | 30%              | 20%         |

For the above date, display customer satisfaction survey using Band Chart.

- 5. A Person takes a loan of Rs. 5,00,000/- for a tenure of 30 years, find the monthly payments (EMI) for the varied interest rates (Assume interest rate start with 12% and incremented by 2% in each month). Calculate the amount of interest and Principal that is paid in the second year. (use what if Analysis tool)
- 6. Suppose there is a bookstore that has 100 books in storage. The original price of the book is 250 and certain number of books was sold at that price. Later, the bookstore announced a 10% discount on that book and cleared off the stock. You might want to know how many books are sold at the original price to obtain total revenue of 24,500.
- 7. Suppose you want to have a report displaying the following (Explore Data using Pivot Table)
  - a. Data for five disciplines Archery, Diving, Fencing, Figure Skating and Speed Skating.
  - b. Regions that scored more than 80 medals in these 5 disciplines.
  - c. The count of medals in each of the five disciplines in each of these regions.
  - d. Total count of medals for the five disciplines in each of these regions.

- 8. Consider the data of 20 employees are stored in two different tables. First table consists of name, employee ID and Second table consists of employee ID, salary. Find the employee salary using lookup table from second table to first.
- 9. In Olympic, 20 countries participated and won various medals by male and female in equal propositions. Display the medal count for each country with power view charts (Pie, Column, Bar, Line, Scatter, and Bubble).
- 10. Consider the sequence of data from 1 to 100, where Male are 48% and Female are 52% in the data. For the given data create Male vs Female Info-graphic Chart, Male vs Female Ratio Chart and Wafffle chart.

#### Activities:

- 1. Negative binomial distribution: Failure of server's problems,
- 2. Negative binomial distribution: Contamination problem, flaws in wires.
- 3. Exponential distribution: lack of memory property.
- 4. Continuous random variable: Shaft conforms.
- 5. Continuous random variable: detection of signal, Digital transmission channel.

Course Objective: Design a database and write SQL queries.

Course Outcomes(COs): Upon completion of the course, students shall be able to

#### MODULE – 1

10 Hrs

**Introduction:** Introduction; An example; Characteristics of Database approach; Actors on the screen; Advantages of using DBMS approach. Data models, schemas and instances; Three-schema architecture and data independence; Database languages and interfaces; The database system environment; Centralized and client-server architectures; Classification of Database Management systems. **Entity-Relationship Model:** Using High-Level Conceptual Data Models for Database Design; An sample Database Application; Entity Types, Entity Sets, Attributes and Keys. Relationship types, Relationship Sets, Roles and Structural Constraints; Weak Entity Types; ER Diagrams, Naming Conventions and Design Issues.

#### MODULE – 2

10 Hrs

**Relational Model and Relational Algebra:** Relational Model Concepts; Relational Model Constraints and Relational Database Schemas; Update Operations, Transactions and dealing with constraint violations; Unary Relational Operations: SELECT and PROJECT; Relational Algebra Operations from Set Theory; Binary Relational Operations: JOIN-variations of JOIN, OUTER JOIN operations. **SQL:** SQL Data Definition and Data Types; Specifying basic constraints in SQL; Basic Retrieval queries in SQL;

MODULE – 310 HrsContinued: Insert,Delete and Update statements in SQL; Additional features of SQL, More complex<br/>SQL Retrieval Queries; Views; Schema Change Statements in SQL.Database Design-1: Informal Design Guidelines for Relation Schemas; Functional Dependencies;<br/>Normal Forms Based on Primary Keys-1NF,2NF,3NF.MODULE – 410 Hrs

**Database Design-2: Transaction management:** The ACID Properties- Consistency and Isolation, Atomicity and Durability; Transactions and Schedules; Concurrent Execution of Transactions- revalorization for Concurrent Execution, Serializability, Anomalies Due to Interleaved Execution, Schedules Involving Aborted Transactions; Concurrency control- 2PL, Serializability, and Recoverability, View Serializability; Introduction to Lock Management - Implementing Lock and Unlock Requests

## **Reference Books:**

1. Discrete Mathematical Structures, by D. S. Malik & M. K. Sen, Thomson's Publications, First edition, 2006.

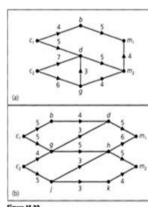

# **Activities List**

- 1. Application of switching network
- 2. Application to algorithm testing using computational complexity.
- 3. Application of graph theory to study ecosystem
- 4. Application of graph theory in sociology and psychology
- 5. Computation of number of different ways n rooks can be arranged on an n x n chess board so that no two rooks can attack each other for all positive integers n.
- 6. Discuss ways in which the current telephone numbering plan can be extended to accommodate the rapid demand for more telephone numbers.
- 7. Application of functions in vending machine.
- 8. **Graph Theory:** Basic terminologies of a graph. Discussion of connected and disconnected graphs, Euler and Hamilton graphs, planar graphs, discuss ways in which the current telephone numbering plan can be extended to accommodate the rapid demand for more telephone numbers.
- 9. **Trees:** Definition, properties of a tree. Weighed trees, prefix codes. Modelling of real-life problems using graphical approach and their analysis.

## Activity:

- 1. Two cases of soft drinks, 24 bottles of one type and 24 of another are distributed among five surveyors who are conducting taste tests. In how many ways can the 48 bottles be distributed so that each surveyors gets (a) at least two bottles of each type? (b) At least two bottles of one particular type and at least three of the other?
- 2. How can Mary split up 12 hamburgers and 16 hot dogs among her sons Richard, Peter Christopher, and James in such a way that James gets at least one hamburger and three hot dogs, and each of his brothers gets at least two hamburgers but at most five hot dogs?
- 3. Sergeant bueti must distribute 40bullets (20 for rifkes and 20 for handguns) among four officers so that each officer gets at least two, but no more than seven, bullets of each type. In how manyways can he do this
- 4. Nineteen students in a nursery school play a game each day where they hold to hands to form a circle. For how many days can they do this with no students holding hands with the same playmate twice?
- 5. In each of the following "transport networks" two companies c1 and c2, produce a certain product that is used by two manufactures, m1 and m2. For the network shown in part(a) of Fig. 13.22, company c1 can produce 8 units and company c2 can produce 7 units; manufacturer m1 requires 7 units and manufacturerm2 needs 6 units. In the network shown in Fig 13.22 (b), each company can produce 7 units and each manufacturer needs 6 units. In which situation(s) can the producers meet the manufactures demands?

6. Fritz is in charge of assigning students to part-time jobs at the college where he works. He has25 student applications, and there are 25 different part-time jobs available on the campus. Each applicant is qualified for at least four of the jobs, but each job can be performed by at most four of the applicants. Can Fritz assign all the students to jobs for which they are qualified? Explain. Characterize the type of graph in which an Euler trail (circuit) is also a Hamilton path (cycle).

workstations on the LAN. In this procedure students examine the user-level access control, that is, access is granted based upon access privileges granted to a single user or a group of users. Another lab activity is the configuration of a client computer for print sharing.

Lab 6: Wireless Networks02 HrsIn this lab students will install and configure the Cisco Aironet Wireless Access point, which allows<br/>laptops and other mobile computer systems wireless access to a network, and perform a link test to<br/>assess the performance of the RF link. Also students learn how to implement a strong network security<br/>by changing the Service Set Identifier (SSID), and establish a strong Wi-Fi Protected Access (WPA)<br/>pass-phrase on the router or access point. Then configure all the wireless computers and devices on the<br/>network to associate with the SSID of WPA-enabled router or access point using the same WPA pass-<br/>phrase.02 Hrs

This lab introduces the concepts of IP forwarding and routing between IP networks. The lab exercise show how to set up a Windows PC and a Cisco router as an IP router and reveals the similarities of IP forwarding and routing tables on a Widows PC and a Cisco router. Students learn how to interpret and manually edit routing-table entries in a network with multiple IP networks and IP routers.

# Lab 8: Client-Server Network Configuration02 HrsStudents are introduced to the installation of Window Server tools on a Windows Professional<br/>workstation and set up a user account on the Windows server. Also create and manage networked<br/>groups, and manage the security policies of users and the network.02 Hrs

#### Lab 9: Routing Information Protocol

The lab explores a routing protocol based on the distance-vector algorithm using OPNET. The goal of the lab is to configure and analyze the performance of the Routing Information Protocol (RIP) model. Here students study how RIP provide a distributed, dynamic way to solve the problem of finding the lowest-cost path in the presence of link and node failures and changing edge costs. A lab exercise with the routing protocol RIP explores the analysis of the routing tables generated in the routers based on distance-vector algorithm, and how RIP is affected by link failures.

Transition towards Value-based Life and Profession.

## **Self-Learning Activities:**

- 1. Sharing about Oneself and Exploring Natural Acceptance
- 2. Exploring Harmony of Self with the Body
- 3. Exploring the Feeling of Respect
- 4. Exploring the Four Orders of Nature Lecture and Exploring Co-existence in Existence
- 5. Exploring Humanistic Models in Education, Exploring Steps of Transition towards Universal Human Order.
