MALNAD COLLEGE OF ENGINEERING, HASSAN

(An Autonomous Institution Affiliated to VTU, Belgaum)

Autonomous Programmes

Bachelor of Engineering

DEPARTMENT OF

INFORMATION SCIENCE AND ENGINEERING

SYLLABUS

V & VI Semester (2021 Admitted Batch)

(3rd Year)

Academic Year 2023-24

VISION

The department will be a premier centre focusing on knowledge dissemination and generation to address the emerging needs of information technology in diverse fields.

MISSION

- 1. To make students competent to contribute towards the development of IT field
- 2. Promote learning and practice of latest tools and technologies among students and prepare them for diverse career options
- 3. Collaborate with industry and institutes of higher learning for Research and Development, innovations and continuing education
- 4. Developing capacity of teachers in terms of their teaching and research abilities
- 5. Develop software applications to solve engineering and societal problems

PROGRAM EDUCATIONAL OBJECTIVES (PEOs)

Graduates will:

- **PEO1:** be successful professionals in IT industry with good design, coding and testing skills, capable of assimilating new information and solve new problems
- **PEO2:** communicate proficiently and collaborate successfully with peers, colleagues and organizations

PEO3: be ethical and responsible members of the computing profession and society

PEO4: acquire necessary skills for research, higher studies, entrepreneurship and continued learning to adopt and create new applications

PROGRAM OUTCOMES (POs)

Engineering Graduates will be able to:

- 1. **Engineering knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- 2. **Problem analysis**: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- 3. **Design/development of solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- 4. **Conduct investigations of complex problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- 5. **Modern tool usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.
- 6. **The engineer and society**: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- 7. Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
- 8. **Ethics**: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
- 9. **Individual and team work**: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- 10. **Communication**: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
- 11. **Project management and finance**: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
- 12. Life-long learning: Recognize the need for, and have the preparation and ability toengage in independent and life-long learning in the broadest context of technological change.

PROGRAM SPECIFIC OUTCOMES (PSOs)

Upon graduation, students with a degree B.E. in Information Science & Engineering will be able to:

- 1. Design and Develop efficient information systems for organizational needs.
- 2. Ability to adopt software engineering principles and work with various standards of Computing Systems.

Scheme of Evaluation (Theory Courses)

Assessment	Marks
THREE CIE's conducted for a total of 40 marks	40
Activities as decided by course faculty	10
SEE	50
Total	100

Scheme of Evaluation (Laboratory Courses)

Assessment	Marks
Continuous Evaluation in every lab session by the Course coordinator	10
Record Writing	20
Laboratory CIE conducted by the Course coordinator	20
SEE	50
Total	100

Examination	Maximum Marks	Minimum marks to qualify
CIE	50	20
SEE	50	20

Scheme & Syllabus for III Year B. E. Information Science and Engineering

Academic Year 2023-24

FIFTH SEMESTER												
Course Category	Course Code	Course Title	L-T-P (Hours)	Credit	Contact Hours							
PCC	21IS501	Software Engineering	3-0-0	3	3

			Total		19	24						
			Elective - II									
Data Storage &	Analytics		21IS621 - Big Data Technologies									
Software Applic	ation Developm	21IS622 - Parallel Computing										
Networking			21IS623 - Multimedia Computing 21IS624 - Network Manag			gement						
Image Processin	g		21IS625- Digital Image Processing									

Course Title	SOFTWARE ENGINEERING								
Course Code	2115501	(L-T-P)C	(3-0-0)3						
Exam	3 Hrs.	Hours/Week	3						
SEE	50 Marks	Total Hours	40						
SEE	50 Marks	Total Hours	4						

Course Objective: Use Software Engineering Principles for Application development **Course outcomes:** At the end of course, student will be able to:

#	Course Outcomes	Mapping to PO's	Mapping to PSO's
1	Analyze a system for identifying the software requirements	2	2
2	Apply software process activities during system design	3	2
3	Apply different approaches of verifying and validating a software	1	2
	product.		
4	Apply various project management activities	3	2
	MODULE – 1		10 Hrs.

Introduction: Professional Software Development, Software Engineering Ethics. Case studies: An insulin pump control system, Software Processes: Software Processes models, Process activities, coping with change, The Rational Unified Process. Agile Software Development: Agile Methods, Plandriven and Agile Development, Extreme programming. Agile Project Management. Scaling Agile Methods.

Self Study: Case Studies- A patient information system for mental health care, A wilderness weather station

MODULE – 2 10 Hrs. **Requirements Engineering:** Functional and non-functional requirements. The software Requirements Document. Requirements Specification, Requirements Engineering Processes. Requirements Elicitation and Analysis. Requirements validation. Requirements Management. System Models: Context models. Interaction models. Structural models. Behavioural models. Model-driven engineering.

Self Study: Behavioural models

MODULE -3 10 Hrs. Design and Implementation: Object-oriented design using the UML, Design patterns, Implementation issues, Open source development. Software Testing: Development testing, Test-driven development, Release testing, User testing. Software Evolution: Evolution processes, Program evolution dynamics. Software maintenance, Legacy system management Self Study: Designing UML diagrams **MODULE -4** 10 Hrs. Software Project Management: Software Project Management Complexities, Responsibilities of a software project Manager, Project Planning, Metrics for project size estimation, Project estimation techniques, Empirical estimation techniques, Scheduling, Organization and Team Structures, Staffing, **Risk Management**

Self Study: COCOMO, ISO9000, SEI Capability Maturity Model, Other Important Quality Standards, Six Sigma.

Exam	3 Hrs.	Hours/Week	3							
SEE	50 Marks	Total Hours	40							
JEE	SU IVIARKS	Total Hours	40							

Course Objective: Students will be able to develop Information System solutions like ERP, CRM, and managerial issues relating to information systems.

Course outcomes: At the end of course, student will be able to:

#	Course Outcomes	Mapping to PO's	Mappinន្ to PSO's
1.	Explain basic principles and working of information technology and	1	2
	the role of information systems in business processes	_	
2.	Articulate the importance of customer relationship management,	2	2
	Enterprise resource planning and E-commerce.	2	2
3.	Apply the principles of information systems to a given business	6	2
	Scenario.	0	Z
4.	Apply principles of IT in business administration.	8,9	2

MODULE-1

10 Hrs.

Foundations of IS in Business: Information Systems in Business: Introduction, The Real World of Information Systems, The Fundamental Role of IS in Business, Types of IS, System Concepts: A Foundation, Components of an Information System, Information System Resources.

Case studies :business intelligence, innovating with IT, business success, IT processes, spark batteries **Competing with IT**: Fundamentals of Strategic Advantages: Strategic IT, Competitive Strategy Concepts, The Competitive Advantage of IT, The Value Chain and Strategic IS, Reengineering Business Processes: The Role of IT, Creating a Virtual Company, Building a Knowledge-Creating Company.

Case studies: IT risks and value, business on smart phones, trading securities, reinventing IT, automotives.

MODULE-2								
Electronic Business Systems: Enterprise Business Systems: Introduction, Cross-functional Enterprise								
Applications,	Enterprise	Application	Integration	, Transacti	on Processing	Systems,	Enterprise	
Collaboration	Systems,	Functional	Business	Systems:	Introduction,	Marketing	Systems,	
Manufacturin	g Systems.							
Case studies:	enterprise a	rchitects, nati	ionwide insu	irance, Cisco	systems ,strate	egic IT,dishte	e.com	

Enterprise Business Systems: Customer Relationship Management: Introduction, What is CRM? The Three Phases of CRM, Benefits and Challenges of CRM, Trends in CRM, Enterprise Resource Planning: Introduction, What is ERP? Benefits and Challenges of ERP, Trends in ERP.

Case studies: DirecTV, Kennametal, supply chains, Berlin packaging, relationship with dealers.

MODULE-3							
Electronic Commerce System	ns : Electronic Comn	nerce Fundar	mentals: In	troduction, T	The Scope o	f	
Ecommerce, Essential E-Co	mmerce Processes	Electronic	Payment	Processes,	E-Commerce	ć	

Applications

and Issues: E-commerce Application Trends, Business-to- Consumer e-Commerce.

Case studies : Star bucks, LinkedIn, Entellium, Royal bank, egurucool.com

Decision Support Systems: Decision Support in Business: Introduction, Decision Support Systems (DSS), Management Information Systems, On-line Analytical Processing, Executive Information Systems,

Knowledge Management Systems, Business and Artificial Intelligence (AI), Expert Systems.

Case studies: Valero energy, virtual stores, Goodyear, Hillman group, Indian distributors.

SQL	(contd.): More C	omplex SQL Queries, Ir	nsert Delete and Update Stater	nents in SQL	, Specifying	
Constraints as Assertion and Trigger, Views (Virtual Tables) in SQL, Schema Change Statements in SQL.						
Self	Study: Approach	es to Database Progran	nming, Impedance Mismatch, St	tored proced	ure	
Data	base Design: In	formal Design Guidelir	nes for Relation Schemas, Fu	nctional Dep	endencies,	
Norm	nal Forms Based	on Primary Keys, Gen	eral Definitions of Second an	d Third Norr	nal Forms,	
Boyce	e-Codd Normal F	orm, Multivalued Depe	endency and Fourth Normal Fo	orm, Join Dep	pendencies	

and Fifth Normal Form.

MODULE-4

Transaction Management: The ACID Properties, Transactions and Schedules, Concurrent Execution of Transactions, Lock - Based Concurrency Control, Performance of Locking, Transaction Support in SQL, Introduction to Crash Recovery. Crash Recovery: Introduction to ARIES.

NoSQL: An overview of NoSQL, Characteristics of NoSQL, NoSQL storage types, Advantages and Drawbacks of NoSQL,.

Practical Component:

Perform the following programs using MySQL.

1. Consider the following schema:

EMPLOYEE (Ename, Ssn, Bdate, Sex, Address, salary, Mgrssn, Dno)

DEPARTMENT (Dname, Dnumber, Mgrssn, Mgr_start_date)

PROJECT (Pname, Pnumber, Plocation, Dnum)

WORKS_ON (Essn, Pno, Hours)

DEPENDENT(Essn, Dependent_name,Sex)

Create above tables by specifying primary key, foreign key and other suitable constraints.

Insert atleast 5 tuples to each created table.

i. Retrieve the name and address of all employees who work for the "ISE" department.

ii. For each employee, retrieve the employee's name and the name of his or her immediate supervisor

iii. Find the sum of all salaries of all employees

iv. For each department, retrieve the department number, the number of employees in the department and their average salary.

2. Consider the following relation schema:

SAILORS (Sid: integer, Sname: string, Rating: integer, Age: real)

BOATS (Bid: integer, Bname: string, Color: string)

RESERVES (sid: integer, Bid: integer, Day:date)

Create above tables by specifying primary key, foreign key and other suitable constraints. Insert atleast 5 tuples to each created table.

Design a database to the satisfy the above requirements and answer following queries

i. Find all sailors with a rating above 7

ii. Find the names of sailors who have reserved boat number 103

iii. Find the names of sailors who have reserved a red boat

iv. Find the names of sailors who have reserved a red or a green boat

3. Consider the following relation schema:

STUDENT (Snum: integer, Sname: string, Major: string, Level: string, Age: integer)

CLASS (Cname: string, Meets at: string, Room: string, Fid: integer)

ENROLLED (Snum: integer, Cname: string)

FACULTY (Fid: integer, Fname: string, Deptid: integer)

The meaning of these relations is straightforward; for example, enrolled has one record per studentclass pair such that the student is enrolled in the class. Level is a two character code with 4 different values (example: Junior: JR etc)

Write the following queries in SQL. No duplicates should be printed in any of the answers.

i. Find the names of all Juniors (level = JR) who are enrolled in a class taught by Prof. Harshith

ii. Find the names of all classes that either meet in room R128 or have five or more Students

enrolled.

iii. Find the names of all students who are enrolled in two classes that meet at the same time.

iv. Find the names of faculty members who teach in every room in which some class is taught.

4. Consider the relation schema for book dealer database:

AUTHOR (Author-id:int, Name:string, City:string, Country:string)

PUBLISHER (Publisher-id:int, Name:string, City:string, Country:string)

CATALOG (Book-id:int, Title:string, Author-id:int, Publisher-id:int, Category-id:int, Year:int, Price:int) CATEGORY (Category-id:int, Description:string)

ORDER-DETAILS (Order-no:int, Book-id:int, Quantity:int)

Create the above tables by properly specifying the primary keys and the foreign keys. Enter atleast five tuples for each relation.

i. Give the details of the authors who have 2 or more books in the catalog and the price of the books is greater than the average price of the books in the catalog and the year of publication is after 2000.

ii. Find the author of the book which has maximum sales.

iii. Demonstrate how you increase the price of books published by a specific publisher by 10%

iv. List any department that has all its adopted books published by a specific publisher

5. Consider the schema for Movie Database:

ACTOR (Act_id, Act_Name, Act_Gender) DIRECTOR(Dir_id, Dir_Name, Dir_Phone)

MOVIES (Mov_id, Mov_Title, Mov_Year, Mov_Lang, Dir_id)

MOVIE_CAST (Act_id, Mov_id, Role)

RATING (Mov_id, Rev_Stars)

Write SQL queries to

Create the above tables by properly specifying the primary keys and the foreign keys. Enter atleast five tuples for each relation.

1. List the titles of all movies directed by 'Hitchcock'.

2. Find the movie names where one or more actors acted in two or more movies.

3. List all actors who acted in a movie before 2000 and also in a movie after 2015.

4. Update rating of all movies directed by 'Steven Spielberg' to 5.

6. Consider the following database for a banking enterprise

BRANCH (branch-name: String, branch-city: String, assets: real)

ACCOUNTS (accno: int, branch-name: String, balance: real)

DEPOSITOR (customer-name: String, customer-street: String, customer-city: String)

LOAN (loan-number: int, branch-name: String, amount: real)

BORROWER (customer-name: String, loan-number: int)

Create the above tables by properly specifying the primary keys and the foreign keys. Enter atleast five tuples for each relation.

1. Find all the customers who have at least two accounts at the Main branch.

2. Find all the customers who have an account at all the branches located in a specific city.

Demonstrate how you delete all account tuples at every branch located in a specific city.

Text Books:

1. Elmasri and Navathe,: Fundamentals of Database Systems", 7th Edition, Addison-Wesley,2015.

2. Raghu Ramakrishnan and Johannes Gehrke," Database Management Systems", 3rd Edition,

Reference Books:

4	Analyze the need for different protocols in data link layer.	2	-
			1

MODULE – 1 10 Hrs. Introduction: Data Communications, Networks, Network Types, Network Models: Protocol Layering, TCP/IP Protocol Suite, The OSI Model. Introduction to Physical Layer: Data and Signals, Data Division of the Division of

Periodic Analog Signals, Digital Signals, Transmission Impairment, Data Rate Limits, Performance, Digital Transmission: Digital-to-Digital Conversion - Line Coding, Line Coding Schemes.

MODULE – 210 Hrs.Digital Transmission (Contd.): Block Coding and Scrambling, Analog-to-Digital Conversion,
Transmission Modes, Analog Transmission: Digital-to-Analog Conversion, Analog-to-Analog
Conversion. Transmission Media: Introduction, Guided Media, Unguided Media: WirelessMODULE -310 Hrs.

Switching: Introduction, Circuit-Switched Networks, Packet Switching. Introduction to Data-Link Layer: Introduction, Link-Layer Addressing . Error Detection and Correction: Introduction, Block Coding, Cyclic Codes, Checksum, Forward Error Correction.

Data Link Control: DLC Services, Data-Link Layer Protocols, HDLC. Other Wired Networks: Cable Networks, SONET, Architecture, layers ,ATM.

10 Hrs.

MODULE -4

Tutorial:							
Sl. No.	List of Practicals						
1	Study of Network Components						
2	Study of Analog and Digital Signals.						
3	Study of Network Topologies.						
4	To connect two pc's using peer to peer communication.						
5	To study Error Detection & Corrections methods.						
6	To study the different line coding schemes.

Course Title	MINI PROJECT – 1 (DATABASE AND JAVA APPLICATION)						
Course Code	211S507	L-T-P	(0-0-2) 2				
Exam	3 Hrs.	Hours/Week	2				
SEE	50 Marks	Total Hours	26				

Students should form batches of 3-4 members and develop database applications using Oracle/MySQL/Microsoft SQL as backend and Java as front end.

#	Course Outcomes	Mapping to PO	Mapping to PSOs
1.	Identify a real life/engineering problem, and conduct investigation to address the problem	1,2	1
2.	Apply software engineering principles in planning & designing the solution to the chosen problem	1,2,3	2
3.	Implement & test the design with appropriate techniques, resources and contemporary tools	3,5	1
4.	Communicate effectively with team members and mentors, make presentations and prepare technical document	9,10,11,12	1
5.	Use ethical practices in all endeavours	8	1

Performance	Low	Madium	lliak
Indicators	LOW	weatum	nign
Literature Survey	Literature Survey not	Incomplete literature	Extensive literature
and Problem	pertaining to the title	survey and improper	survey with clear state
Definition	of the project	problem definition	of the art problem
(5 Marks)	(2M)	(3-4 M)	definition (5M)
Effective	Has no coherent	Has some strategies	Formulates strategies
Formulation	strategies for problem	for problem -solving,	for solving problems
of Design strategies	solving	but does not apply	(8-10 M)

(10 Marks)	contents not sufficient	good content wise	and	well	framed
	(2 - 4 M)	(5-7 M)	conter	nts	
			(8-10	M)	

The mini project work is to be carried out in three phases:

- **Project Phase I** Students in consultation with the guides shall carry out literature survey to finalize the topic of the project. Evaluation of the project and its feasibility is done at the end of two weeks.
- **Project Phase II** Students are expected to present the system analysis, Requirements Specification, design carried out/ algorithms developed and intermediate results at the end of six weeks.
- **Project Phase III** Final internal evaluation shall be taken up during this phase. This includes presentation, project demonstration and report
- The continuous evaluation of the project phases I, II, and III shall be carried out by the committee consisting of Head of the department, Guide and other faculty.

SUMMER INTERNSHIP 2 (21INT2)

Guidelines for conducting Summer Internship –II on Innovation/ Entrepreneurship/ Societal Internship/ Skill Enhancement for 2021 admitted NEP Batch

- 1. A minimum of 3 Credit of internship after II year may be counted towards B.E. Degree Program.
- 2. During IV semester to V Semester transition, four weeks internship is mandatory.
- 3. Internship report and certificate need to be submitted by the student to the concerned department for evaluation at the end of internship.
- 4. Internship evaluation will be done at the end of internship before the start of 5th Semester.

There are three options for carrying out the Summer internship II as shown below:

- 5. Option-1 Students are suggested to carry out internship on Innovation/ Entrepreneurship in industry.(Innovation refers to a new or improved product or process or a combination thereof that differs marginally or significantly from the unit's previous product & Entrepreneurship refers to setting up a new business or businesses, taking on financial risks in the hope of profit)
- 6. Option-2 If industry internships are not available students are encouraged to take up Societal Internship in any Reputed NGOs(Internship at villages, slums or urban areas, Swachch Bharat etc. can be under social internship. A detail report should be submitted by the candidate with appropriate documents supporting the work carried out. Certificate should be signed by gazetted officer)
- Option-3 If students fail to get internship in Innovation/ Entrepreneurship and Societal Internship then the college shall advise those students to take Skill Enhancement courses offered by NPTEL.

Courses for Elective Group - I

Course Title	DATA WAREHOU	JSING AND MINING	
Course Code	21 \$511	(L-T-P)C	(3-0-0)3
Exam	3 Hrs	Hours/Week	3
SEE	50 Marks	Total Hours	40

Course Objective: Students will be able to select appropriate data mining techniques to extract useful patterns.

Course outcomes: At the end of course, student will be able to:

#	Course Outcomes	Mapping to PO's	Mapping to PSO's
1	Acquire the knowledge on data quality and data pre-processing	1	1
2	Explain the process of data mining , Classification and Association Analysis	2,3	-
3	Acquire the knowledge of Data Warehouse design , Modelling and usage	3	1
4	Carry out the cluster analysis and highlight the applications of data mining	2	-

MODULE – 110Hrs.Introduction: Data: Why Data Mining? What is Data Mining? What kinds of data can be mined?What kinds of pattern can be mined?, Which technologies are used? Major issues in data mining.Getting to know your data: Data objects and attribute types, Basic statistical description of data:
measuring the central tendency, Measuring the dispersion of data, measuring data similarity and
dissimilarity.

MODULE – 2

10Hrs.

Data Pre-processing: Data Pre-processing: An overview, Data cleaning, Data integration, Data Reduction: overview of data reduction strategies, wavelet transforms, Principal component analysis, attributes subset selection, Data Transformation: min-max normalization and Z-score normalization. **Data Warehouse and online Analytical processing:** Data Warehouse: Basic Concepts, Data Warehouse modelling : Data cube and OLAP, Data warehouse design and usage: A business analysis frame work for data warehouse design, Data warehouse design process, Data warehouse usage for information processing.

MODULE -3

10Hrs.

Classification: Preliminaries, General Approach to Solving a Classification Problem, Decision Tree Induction, Rule-based classification, K- Nearest-neighbour Classifier. Mining frequent patterns **Association and correlations: Basic Concepts and Methods**: Basic Concepts, Frequent item set mining methods: Apriori Algorithm, generating association rules from frequent item sets, Improving the efficiency of Apriori, A Pattern growth Approach for Mining Frequent item sets.

				MC	DULE -4					10Hrs.
Cluster Analysis: Basic Concepts and Methods, Cluster Analysis, Partitioning Met										
Agglomerative versus divisive hierarchical clustering, DBSCAN. Data Mining Trends and resea									search	
frontiers: Data Mining Applications, Data mining and society, Data mining trends.

Course Title	Artificial Intelligence						
Course Code	2115602	L-T-P	(4-0-0) 4				
Exam	3 Hrs.	Hours/Week	4				
SEE	50 Marks	Total Hours	40 P				

Course Objective: Students will be able to apply the concepts of Artificial Intelligence to construct knowledge based systems

Course Outcomes: At the end of course, student will be able to:

#	Course Outcomes	Mapping to PO	Mapping to PSOs
1.	Elucidate different types of intelligent agents, search strategies, logic and examples of learning.	1	1
2.	Analyze the different agents, search strategies and first-order logic.	2	1
3.	Develop a solution for the given problem using different intelligent agents.	3, 5,9, 10, 12	1

MODULE-1

14 Hrs.

Introduction: What is AI? **Intelligent Agents**: Agents and environment; Good behaviour: The Concept of Rationality; the nature of environment; the structure of agents. **Problem-solving**: Problem-solving agents. Example problems; Searching for solution;

Uninformed search strategies: Breadth-first search, Uniform-cost search, Depth-first search, Depth-limited search, Iterative deepening depth-first search, Bidirectional search.

12 Hrs.

Informed (Heuristic) Search Strategies: Greedy best-first search, A* search, Optimality of A*, Memorybounded heuristic search; **Local Search Algorithms and Optimization Problems**: Hill-climbing search, Simulated annealing.

Local beam search, Genetic algorithms; **On-line search agents and unknown Environments**: Online search problems, Online search agents, online local search, learning in online search.

MODULE-3	12 Hrs.
Logical Agents: Knowledge-based agents; The Wumpus world, Logic, propositional logic,	Propositional
Theorem proving	
First-Order Logic: Representation revisited; Syntax and semantics of first-order logic; Usin	g first-order
logic, Knowledge engineering in first-order logic.	

MODULE-412 Hrs.Inference in first-order logic: propositional versus first-order inference, uniform and lifting, forward
chaining, backward chaining, resolutionLearning from Examples: Forms of Learning; supervised learning; Learning decision trees, Evaluating and

Learning from Examples: Forms of Learning; supervised learning; Learning decision trees, Evaluating and choosing the best hypothesis, The theory of Learning.

(10 Marks)	not sufficient	content wise	and well framed
	(2 - 4 M)	(5-7 M)	contents
			(8-10 M)

Initially Students will be taught the basic concepts about XHTML, Javascript, PHP, MYSQL and following programming exercises are carried out to understand the concepts.

- 1. Develop and demonstrate a XHTML document that illustrates the use of external style sheet, ordered list, table, borders, padding, color, and the tag.
- 2. Develop and demonstrate, using Javascript script, a XHTML document that contains three short paragraphs of text, stacked on top of each other, with only enough of each showing so that the mouse cursor can be placed over some part of them. When the cursor is placed over the exposed part of any paragraph, it should rise to the top to become completely visible.
- 3. Using Javascript script, develop a XHTML document that collects the USN (the valid format is: A digit from 1 to 4 followed by two upper-case characters followed by two digits followed by two upper-case characters followed by three digits; no embedded spaces allowed) of the user. Event handler must be included for the form element that collects this information to validate the input. Messages in the alert windows must be produced when errors are detected.
- 4. Design an XML document to store information about a student in an engineering college affiliated to VTU. The information must include USN, Name, Name of the College, Brach, Year of Joining, and e-mail id. Make up sample data for 3 students. Create a CSS style sheet and use it to display the document.
- 5. Write a PHP program to store current date-time in a COOKIE and display the 'Last visited on' datetime on the web page upon reopening of the same page.
- 6. Write a PHP program to store page views count in SESSION, to increment the count on each refresh, and to show the count on web page.
- 7. Using PHP and MySQL, develop a program to accept book information viz. Accession Number, Title, Authors, Edition and Publisher from a web page and store the information in a database and to search for a book with the title specified by the user and to display the search results with proper headings.

After the completion of above exercises a mini project work is to be carried out in three phases:

- **Project Phase I (5 marks)** Students in consultation with the guides shall carry out literature survey to finalize the topic of the project. Evaluation of the project and its feasibility is done at the end of two weeks.
- **Project Phase II(25 marks)** Students are expected to present the system analysis, Requirements Specification, design carried out/ algorithms developed and intermediate results at the end of six weeks.
- **Project Phase III (20 marks)** Final internal evaluation shall be taken up during this phase. This includes presentation, project demonstration and report

The continuous evaluation of the project phases – I, II, and III shall be carried out by the committee consisting of Head of the department, Guide and other faculty.

Course	Title Java Programm	ning		
Course	Code 21OEIS61 (L-T-P)C		(3-	0-0)3
Exam	3 Hrs. Hours/Week			3
SEE	50 Marks Total Hours			40
Course Course #	Objective: outcomes: At the end of course, student will be able to: Course Outcomes	Mapp PO's	ing to	Mapping to PSO's
1.	Comprehend the fundamental concepts Object Orie Programming	ented 1		1
2.	Apply Object Oriented constructs for program development	nt 3		1
3.	Analyze threads and exception handling to problem solving	g 2		

Object Oriented Concepts and Java: Concepts of Object-Oriented programming language: Object, Class, message passing, inheritance, encapsulation, and polymorphism, relationships among objects, Difference between OOP and other conventional programming – advantages and disadvantages of OOP.

10 Hrs.

MODULE – 1

Introduction to Java: Java and Java Applications, How Java Changed the Internet, Java Development Kit(JDK), The Byte Code, Servlets, The Java Buzzwords, Object-Oriented Programming, Simple Java Programs using Control Statements and Blocks of code, Lexical Issues, Data Types, Variables, and Arrays

: The primitive Types, Integers, Floating-Point Types, Characters, Booleans, Literals, Variables, Type Conversion and Casting, Arrays, Strings, Operators : Arithmetic, Bitwise, Relational, Boolean Logical, Assignment Operator, The ? Operator, Operator Precedence. Program Control Statements: Input characters from the Keyword, if statement, Nested ifs, if-else-if Ladder,

MODULE – 2	10 Hrs.						
Program Control Statements: Switch Statement, Nested switch statements, for Loop, Enhance							
Loop, While Loop, do-while Loop, Use break, Use continue, Nested Loops.							
Introducing Classes, Objects and Methods: Class Fundamentals, Declaring Objects, Object Re	ference						
Variables, Methods, Constructors, The this keyword, Garbage collection, Overloading Meth	ods and						
constructors, Argument Passing.							
MODULE -3	10 Hrs.						

Inheritance, Packages and Interfaces: Inheritance Basics, Using Super, Multilevel Hierarchy, When Constructors are called, Method Overriding, Abstract Classes, Interfaces.

Exception Handling: Exception-Handling Fundamentals, Exception Types, Uncaught Exceptions, Using try and Catch, Multiple catch Clauses, Nested try Statements, throw and throws.

Course Title	CONSTITUTION OF INDIA AND PROFESSIONAL ETHICS							
	(MANDATORY AUDIT COURSE)							
Course Code	21CIP	L-T-P	(2-0-0) 0					
Exam	-	Hours/Week	2					
CIE	50 Marks	Total Hours	26					

Course Objective: Objective of the course is to make students learn the basic concepts and understand the fundamental rights and professional ethics to apply in engineering profession and to make the learners fundamentally strong engineers.

Course Outcomes: After the completion of the course, students shall be able to:

#	Course Outcomes PO's							
1	Enumerate the significance of the preamble of the Constitution, the 12							
	fundamental rights and duties.							
2	Discuss the principles of Freedom of Speech and Expression as a 10,12							
	professional.							
3	Analyse and interpret the present scenario of the nation versus the	6,12						
	constitutional provisions.							
4	Communicate effectively the professional and ethical responsibility as an	8,9,1	0					
	engineer and acquire applicational competence.							
	MODULE - 1		6 Hrs					
Const	titution of India: Evolution of Constitution of India. Salient Features of	of the Con	stitutio	n.				
Prear	nble. Fundamental Rights-Restrictions and Important cases.							
	MODULE - 2 5 Hrs							
Relev	Relevance of Directive Principles of State Policy. Significance of Fundamental Duties. Union Executive-							
The P	The President and Vice President, Prime Minister, Council of Ministers. Parliament.							
MODULE - 3 9 Hrs								
State	State Executive-The Governor, Chief Minister, Council of ministers. Legislature. The Judiciary. Elections.							
Speci	al provisions relating to certain classes- Scheduled Castes, Scheduled Tribes, v	vomen, chi	ldren an	ıd				
backv	ward classes. Emergency provisions.							
	MODULE - 4 6 Hrs							
Profe	Professional Ethics: Scope and aims of engineering ethics. Responsibility of Engineers. Impediments to							
Respo	Responsibility. Honesty, Integrity and Reliability of Engineers. Risk, Safety and Liability in Engineering.							
Case	Studies. Code of Ethics for Engineers.							
<u>Text</u>	Books:
