D3. Project Laboratory/Research Laboratory

DETAILS OF PROJECT LAB

The primary purpose of creating a Project Laboratory in the Civil Engineering Department is to provide a dedicated, innovation-driven space where students can apply theoretical knowledge to real-world engineering problems. This lab aims to strengthen students' practical competencies, research capabilities, interdisciplinary understanding, and industry readiness through hands-on project work.

LIST OF FACILITIES AVAILABLE AT THE PROJECT LAB

A mortar mixer is an essential laboratory device used to produce uniform and consistent mortar by blending cement, sand, and water in controlled proportions. It ensures proper homogenization of materials, reduces human error, and provides repeatable results required for tests such as compressive strength, consistency, and flow of mortar.

A concrete mixer is used to mix cement, fine aggregates, coarse aggregates, and water to produce a workable and homogeneous concrete mix. This machine helps maintain accurate mix proportions, improves uniformity, and is widely used for preparing cubes, cylinders, beams, and other specimens for strength and durability testing.

To ensure proper compaction of freshly mixed concrete, a concrete vibrator is used. It removes entrapped air, enhances density, and ensures that concrete fills all voids and spaces around reinforcement. This process minimizes defects like honeycombing, improves bond strength, and increases the overall durability of concrete structures.
